Anatomy And Physiology Of Spinal Cord:

Organization in the Spinal Cord A. G. Brown, 2012-12-06 The research described in this book arose in large part from a sense of frustration For a number of years I had been studying the physiology of the spinocervical tract a somatosensory pathway in the cat s spinal cord But I did not know precisely where the cells of origin of the tract were located and therefore did not know what they looked like or whether there were any correlations between structure and function It was true that electrophysiological experiments had indicated their probable situation in the dorsal horn and anatomical work had described the morphology of cells that were likely to give rise to the axons of the tract but this was not satisfactory With the publication by Stretton and Kravitz in 1968 of the Procion Yellow ionophoretic method for intracellular staining a new tool became available for studying the morphology of physiologically identified neurones We used the techniques and although very pleased with the beautiful appearance of the dendritic trees of neurones seen in the fluorescence microscope we were again frustrated this time by the inability of Procion Yellow to stain axons for any considerable length Therefore P K Rose and P J Snow and I began to try to develop a method that would stain the axon together with its collaterals in addition to the soma and dendrites of an intracellularly recorded neurone
