Education in and History of Modern Astronomy Richard Berendzen, 1972 Statistical Challenges in Modern Astronomy
IV Gutti Jogesh Babu, Eric D. Feigelson, 2007 This is the fourth in a series of international conferences for the vanguard of researchers in the cross disciplinary field of astrostatistics Both astronomical and statistical communities now recognize the wide array of fascinating methodological issues faced by the modern astronomer Ranging from terabyte wide field surveys to small N samples from cosmology to the search for Earth like planets astronomical research can no longer be pursued with a small toolbox of familiar statistical methods Over thirty distinguished scholars from both fields presented invited talks and commentaries on leading problems in astrostatistics The methodological challenges of inferring cosmological insights from the cosmic microwave background fluctuations the distribution of galaxies in space gravitational lensing and galaxy structure we describe in detail Time series analysis is discussed in a variety of contexts sparse Poisson data multiply periodic systems gravitational wave detection and most dramatically in the search for extrasolar planets Here sophisticated Bayesian model selection with MCMC computations plays a critical role Other topics covered include image processing analysis of mega datasets from large surveys and small N problems in both astronomy and particle physics The volume ends with cross disciplinary overviews and software tutorials The book will be valuable to graduate students and researchers in both astronomy and statistics who seek insights into this promising avenue of cross disciplinary research Publisher's website

intricacy and elegance of the cosmos are steadily being obtained Every few decennia our concepts of the Universe are challenged and substantially modified The reasons for this are the continuous development of new observing techniques and instruments for observatories both ground based and in space in addition to considerable progress in mathematics and physics including computational ability Our Universe harbors numerous phenomena and processes representing conditions that cannot be duplicated in terrestrial laboratories Astronomy therefore frequently leads to fundamentally new insight and knowledge far beyond astronomy itself Last but not least it represents a first inspiring introduction to natural science especially among young people which is an extra motivation to many scientists to contribute to the Astronomy and Astrophysics Theme of this Encyclopedia The book on Astronomy and Astrophysics with contributions from distinguished experts in the field represents a first inspiring introduction to natural science especially among young people which is an extra motivation to many scientists to contribute to the Astronomy and Astrophysics Theme of this Encyclopedia The first chapter which treats the development of astronomy and astrophysics in a historical perspective is followed by an account of the impact of astronomy on human culture and civilization Observational astronomy is facing a number of environmental challenges The nature and complexity of these and how the associated problems are met and overcome are described in the third article Various aspects of our solar system are covered by authoritative articles on the Sun planets including their satellites and smaller bodies plus a review of the laws of motions and orbits of celestial bodies The detection and studies of exo solar planetary systems is rapidly developing field in astronomy which is treated in a separate chapter Then follow fascinating up to date overviews on stars describing their formation structure and life cycles Stars are the building blocks of larger cosmic entities leading to the enigmatic galaxies composed of billions of stars and gradually to clusters of galaxies The final chapters cover the origin and evolution of galaxies and the large scale structure of the Universe including dark matter and dark energy which are among the most fascinating problems of physics today These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs
