Advances in inhalation safety assessment Victoria Hutter,Ewelina Hoffman,Thomas Hofmann, Mary Catherine McElroy,2025-09-16 Inhalation toxicology refers to the route of exposure whereby an inhaled substance can cause direct local toxicity to the airways or exert their action systemically following absorption and metabolism Assessing the inhalation safety of substances is applicable to many sectors producing new products with intended or inadvertent inhaled exposure e g pharmaceutical chemical environmental consumer products Limitations with current tools and approaches to assessing inhalation safety prevent a high proportion of these products ever making it to market due to preclinical safety concerns in animals despite not understanding the relevance of these responses in humans Assessing the safety of substances in the lungs requires in depth knowledge of the properties of the inhaled aerosol deposition within the lungs interaction with biological barriers and the innate immune system and translation of these events to human safety As such advancements in inhalation toxicology rely on interdisciplinary research between the interfaces of the biological and physical sciences Assessing the inhalation safety of substances applicable to many areas which traditionally have used different

approaches e.g. pharmaceutical, chemical, environmental, consumer products. However, the challenges of providing relevant dosing, replicating exposure, categorizing adaptive and adverse responses, and applicability of human-relevant inhalation risk assessment remain a challenge to all sectors. This research topic aims to explore new approaches and technologies within inhalation toxicity and other related fundamental research, including aerosol characterisation, which have the potential to answer the unmet needs within safety assessment.
