

Model Answer

Question No. 1

[5 Marks]

Perform the following operations:

a) $1111 + 1100$

11011

b) $10010110 - 101100$

1101010

c) $10100 \div 100$

00101

d) $010001010000 + 010000010111$ in BDC format

$450 + 417 = 867$ --- also you can add in binary and then convert result to BCD

e) the standard form of expression $(A + B' + C) (B' + C + D')$

the missing variable in the term $(A + B' + C) = D$ or D' , so add DD' to the term =

$(A + B' + C + D) (A + B' + C + D')$

the missing variable in the term $(B' + C + D')$ is A or A' , so add AA' to the term =

$(B' + C + D' + A) (B' + C + D' + A')$

So the standard form =

$(A + B' + C + D) (A + B' + C + D') (B' + C + D' + A) (B' + C + D' + A')$

Question No. 2

[5 Marks]

- a) what is the decimal value of the signed binary number expressed in 1's complement: $11101000?$

Summing the weights where there are 1s, $-128 + 64 + 32 + 8 = -24$

Adding 1 to the result, the final decimal number is $= -24 + 1 = -23$.

- b) what is the equivalent octal number of the binary number: $100110011010?$

$100110011010 = 4632_8$

Logical Grammar is a framework that emerged from the synthesis of two traditions: Categorical Grammar from formal linguistics and substructural logics from logic. Grammatical composition is conceived as resource-conscious logical deduction. Such a grammar is necessarily surface-oriented and lexicalistic. The Curry-Howard correspondence supplies an elegant compositional mapping from syntax to semantics. Anaphora does not seem to fit well into this framework. In type logical deductions, each resource is used exactly once. Anaphora, however, is a phenomenon where semantic resources are used more than once. Generally, admitting the multiple use of lexical resources is not possible because it would lead to empirical inadequacy and computational intractability. This book develops a hybrid architecture that allows to incorporate anaphora resolution into grammatical deduction while avoiding these consequences. To this end, the grammar logic is enriched with a connective that specifically deals with anaphora. After giving a self-contained introduction into Type Logical Grammar in general, the book discusses the formal properties of this connective. In the sequel, Jäger applies this machinery to numerous linguistic phenomena pertaining to the interaction of pronominal anaphora, VP ellipsis, and quantification. In the final chapter, the framework is extended to indefiniteness, specificity, and sluicing.

Questions Veneeta Dayal, 2016. This book synthesizes and integrates 40 years of research on the semantics of questions and its interface with pragmatics and syntax, conducted within the formal semantics tradition. A wide range of topics are covered, including weak-strong exhaustiveness, maximality, functional answers, single-multiple trapped list answers, embedding, predicates, quantificational variability, concealed questions, weak islands, polar and alternative questions, negative polarity, and non-canonical questions. The literature on this rich set of topics, theoretically diverse and scattered across multiple venues, is often hard to assimilate. Veneeta Dayal, drawing on her own research, brings them together for the first time in a coherent, concise, and well-structured whole. Each chapter begins with a non-technical introduction to the issues discussed; semantically sophisticated accounts are then presented incrementally, with the major points summarized at the end of each section. Written in an accessible style, this book provides both a guide to one of the most vibrant areas of research in natural language and an account of how this area of study is developing. It will be a unique resource for the novice and expert alike and seeks to appeal to a variety of readers without compromising depth and breadth of coverage.

Question-orientedness and the Semantics of Clausal Complementation Wataru Uegaki, 2023-01-08. This volume explores the compositional semantics of clausal complementation and proposes a theory in which clause embedding predicates are uniformly question-oriented, i.e. they take a set of propositions as their semantic argument. This theory opens up new horizons for the study of embedded questions and clausal complementation and presents a successful case study on how lexical semantics interacts with syntax and compositional semantics. It offers new perspectives on issues in epistemology and the philosophy of language, such as the relationship between *know-wh* and *know-that* and the nature of attitudinal objects in general. Cross-linguistically attitudinal predicates such as *know*, *tell*, and *surprise* can embed both declarative and

interrogative clauses Since these clauses are taken to represent different semantic objects like propositions and questions the embedding behavior of these predicates poses puzzles for the compositional semantics of clausal complementation In addition the fact that some verbs select for a certain complement type poses further challenges for compositional semantics This volume addresses these issues based on a uniformly question oriented analysis of attitude predicates and proposes to derive their variable behaviors from their lexical semantics The book is essential reading for linguists working on the syntax and semantics of clausal complementation as well as those interested in the role of lexical semantics in compositional semantics It will also be valuable for philosophers who are interested in applying linguistic tools to address philosophical problems

The Logical Foundations of Cognition John Macnamara, Gonzalo E. The Semantics of Opinion Melanie Bervoets, 2019-11-16 This volume sets out to provide a semantics for the future directed opining verbs a novel class whose members are used to describe subjects externally attested opinions toward future possibilities Including verbs like recommend promise and permit the class can be situated within a broader range of opinion verbs including the well known propositional attitudes and key to the investigation here are differences among these groups along the lines of available event types interaction with the common ground and restrictions on subjects and objects Other important semantic topics implicated in the discussion are dispositions free choice disjunction and Neg raising embedded NPI licensing and the host of new data associated with the future directed opining verbs prompts surveys of the expanded scope of these phenomena and corresponding re evaluation of existing theories Collectively the contributions of this work deepen our understanding of predicates that describe opinion and disposition and how these interact with fundamental logical operations like negation and disjunction highlighting the crucial role of contextual factors like relevance for these processes
