The Burning Answer Keith Barnham, 2014-05-15 Our civilisation stands on the brink of catastrophe Our thirst for energy has led to threats from global warming nuclear disaster and conflict in oil rich countries We are running out of options Solar power Keith Barnham argues is the answer In this eye opening book he shows how a solar revolution is developing based on one of Einstein's lesser known discoveries one that gave us laptop computers and mobile phones An accessible guide to renewable technology and a hard hitting critique of the arguments of solar sceptics The Burning Answer outlines a future in which the fuel for electric cars will be generated on our rooftops It is above all an impassioned call to arms to join the solar revolution before it's too late

Synthesis of Adequate Mathematical Descriptions of Physical Processes Yurii Menshykov, 2020-08-11 For effective use of the results of computational calculations it is necessary that the computational schemes used correspond to real physical processes so that the schemes are adequate The issue of adequacy is currently poorly understood and there are also no generally accepted criteria of adequacy This book is the first to address the questions of constructing adequate mathematical descriptions of physical processes and their reasonable use in the future for various purposes It proposes two adequacy criteria quantitative and qualitative and describes several possible algorithms for synthesis of cases when the physical process is composed of a system of ordinary differential equations or a mathematical model in algebraic form The algorithms described here will be useful for specialists in areas where methods of mathematical modeling are used such as mechanics

The Subjectivities and Objectivities of Peer Review Daniel Ucko, 2024-12-16 What do we want Evidence based science When do we want it After peer review We have come to think of peer review as the stamp of quality that separates real

results from mere conjecture but a look under the hood reveals that the participants inside of peer review are far from objective This book reclaims subjectivity and affirms a social mode of objectivity which prevents peer review from overpromising and underdelivering in its vital role in knowledge production *Digital Resilience: Navigating Disruption and Safeguarding Data Privacy* Shishir Kumar Shandilya, Agni Datta, Yash Kartik, Atulya Nagar, 2024-04-29 This book offers an in depth overview of digital resilience defined as the ability of individuals organizations and societies to adapt to and counter various digital threats such as cyberattacks data breaches and other forms of cyber threats Digital resilience not only enables proactive measures but also ensures fault tolerant planning and design The book elaborates on the necessary techniques and methods to achieve digital resilience Key methodologies including quantum computing post quantum cryptography nature inspired cybersecurity zero trust systems zero knowledge proofs multi party computation and the emerging field of space security are discussed in detail The book provides insights into artificial intelligence and machine learning examining their impact on society and organizations It critically analyses the role of cybersecurity in businesses emphasizing its importance for safety and economic stability In addition the book discusses notable cyber incidents offering valuable insights into digital resilience It serves as a comprehensive compilation featuring key terms definitions case studies and references to existing literature and research in cybersecurity analytics information sciences future computing digital resilience and related fields

Epistemology of Experimental Gravity - Scientific Rationality Nicolae Sfetcu, 2019 The evolution of gravitational tests from an epistemological perspective framed in the concept of rational reconstruction of Imre Lakatos based on his methodology of research programmes Unlike other works on the same subject the evaluated period is very extensive starting with Newton's natural philosophy and up to the quantum gravity theories of today In order to explain in a more rational way the complex evolution of the gravity concept of the last century I propose a natural extension of the methodology of the research programmes of Lakatos that I then use during the paper I believe that this approach offers a new perspective on how evolved over time the concept of gravity and the methods of testing each theory of gravity through observations and experiments I argue based on the methodology of the research programmes and the studies of scientists and philosophers that the current theories of quantum gravity are degenerative due to the lack of experimental evidence over a long period of time and of self immunization against the possibility of falsification Moreover a methodological current is being developed that assigns a secondary unimportant role to verification through observations and or experiments For this reason it will not be possible to have a complete theory of quantum gravity in its current form which to include to the limit the general relativity since physical theories have always been adjusted during their evolution based on observational or experimental tests and verified by the predictions made Also contrary to a widespread opinion and current active programs regarding the unification of all the fundamental forces of physics in a single final theory based on string theory I argue that this unification is generally unlikely and it is not possible anyway for a unification to be developed based on current theories of quantum

gravity including string theory In addition I support the views of some scientists and philosophers that currently too much resources are being consumed on the idea of developing quantum gravity theories and in particular string theory to include general relativity and to unify gravity with other forces as long as science does not impose such research programs

What levels of explanation in the behavioural sciences? Giuseppe Boccignone, Roberto Cordeschi, 2015-07-03 Complex systems are to be seen as typically having multiple levels of organization For instance in the behavioural and cognitive sciences there has been a long lasting trend promoted by the seminal work of David Marr putting focus on three distinct levels of analysis the computational level accounting for the What and Why issues the algorithmic and the implementational levels specifying the How problem However the tremendous developments in neuroscience knowledge about processes at different scales of organization together with the complexity of today cognitive theories suggest that there will hardly be only three levels of

explanation Instead there will be many different degrees of commitments corresponding to the different granularities from high level behavioural models to low level neural and molecular models of the cognitive research program For instance Bayesian approaches that are usually advocated for formalizing Marr s computational level and rational behaviour have even been adopted to model synaptic plasticity and axon guidance by molecular gradients As a result we can consider the behavioural scientist as dealing with models at a multiplicity of levels The purpose of this Research Topic in Frontiers in Theoretical and Philosophical Psychology is to promote an approach to the role of the levels and explanation and models which is of interest for cognitive scientists neuroscientists psychologists behavioural scientists and philosophers of science
