|---|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | INPUT A LEVEL<br>INPUT B LEVEL<br>controls | Set output level from preamplifier or line transformer to INPUT A or INPUT B accordingly. Analogous to rear panel. In line mode, used to balance gains from INPUT A and INPUT B; in limiter mode, used to set average level of compression. Continuously variable potentiometer, graduated from 0 to 10. Rotate controls clockwise to increase gain in line mode and to increase average level of compression in limiter mode.                                                                 |
| 2 | VU gain limit meter                        | Displays output level in volume units (VU) read from upper scale. Reference 0 VU corresponds to +6 dB gain for either line or limiter mode, when LIMITER switch is in VU OUTPUT position. Displays dB of compression, read from lower scale, for limiter mode only, when LIMITER switch is in GAIN LEVEL position. Meter is illuminated when power is on.                                                                                                                                      |
| 3 | LIMIT LINE BALANCE<br>control              | Effective only in line mode. Inserts adjustable loss in series with OUTPUT LEVEL control to avoid shifted output level when LIMITING switch is shifted from ON to OFF position. In limiter mode, control is shorted out by LIMITING switch. Once control is set for given average dB of compression, OUTPUT LEVEL control is independent of line or limiter mode. Control rotated clockwise to control for increased dB of compression. Maximum correction approximately 20 dB of compression. |
| 4 | OUTPUT LEVEL control                       | Adjusts output level of compressed signal from INPUT A and INPUT B, with or without limiting, up to maximum of +27 dBm. Amount of compression independent of control setting. Continuously variable potentiometer, graduated from 0 to 10. Rotate control clockwise to increase output level.                                                                                                                                                                                                  |
| 5 | POWER OFF-ON switch                        | Applies dc power from rectified low-voltage ac or external battery to input filter capacitor when switched to ON position. Circuit breaker in line side of power transformer. External battery circuit closed in OFF position.                                                                                                                                                                                                                                                                 |
| 6 | MULTI-GAIN LEVEL/VU<br>OUTPUT switch       | Selects meter function as VU OUTPUT both line and limiter mode or as GAIN LEVEL. Limiter mode only. Gain level constant at 0 dB compression in line mode.                                                                                                                                                                                                                                                                                                                                      |
| 7 | ATTACK-FAST SLOW<br>50 Cycle Adj. switch   | Selects fast or slow attack/release times. Fast position provides fast quarter-cycle attack, typically 10 microseconds, typically 0.8 second release. This setting most often used for speech. SLOW position responds within two cycles typically 33 microseconds and allows typically 2.5-second release. This setting is more suitable for music.                                                                                                                                            |
| 8 | LIMITING OFF-ON switch                     | Selects line or limiter amplifier mode.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
