Willermet, Cathy Willermet, Sang-Hee Lee, Sang-hui Yi (Professor of anthropology), 2020 A critical assessment of how evidence in biological anthropology is discovered collected and interpreted *Biosocial Becomings* Tim Ingold, Gisli Palsson, 2013-06-13 All human life unfolds within a matrix of relations which are at once social and biological Yet the study of humanity has long been divided between often incompatible social and biological approaches Reaching beyond the dualisms of nature and society and of biology and culture this volume proposes a unique and integrated view of anthropology and the life sciences Featuring contributions from leading anthropologists it explores human life as a process of becoming rather than being and demonstrates that humanity is neither given in the nature of our species nor acquired through culture but forged in the process of life itself Combining wide ranging theoretical argument with in depth discussion of material from recent or ongoing field research the chapters demonstrate how contemporary anthropology can move forward in tandem with groundbreaking discoveries in the biological sciences **The Anthropology of White Supremacy** Aisha M. Beliso-De Jesús, Jemima Pierre, Junaid Rana, 2025-01-28 White supremacy has shaped cultural anthropology from its inception yet the discipline also offers powerful tools for understanding how this corrosive force structures societies around the world The Anthropology of White Supremacy explores how this phenomenon works around the globe and within anthropology itself Gathering original essays from a diverse international group of anthropologists this collection illustrates that white

supremacy far from being only a fringe belief of white nationalists and fascists is a core mainstream ideology The book includes essays about many countries including Brazil Mexico Nigeria Norway Senegal South Africa and the United States and takes up such topics as American advertising the Belgian Congo South Asian philosophies police cadets U S immigration courts Guantanamo memoirs Palestinian feminism Hollywood paparazzi and how Indigenous anthropologists can counter the damage of settler colonialism The result reveals not only how anthropology can help us to better comprehend white supremacy but also how the discipline can help us begin to dismantle it With contributions by Omolade Adunbi Samar Al Bulushi Aisha M Beliso De Jesus Michael Blakey Mitzi Uehara Carter Subhadra Mitra Channa Celina de S Vanessa Diaz Britt Halvorson Faye Harrison Sarah Ihmoud Anthony R Jerry Darryl Li Kristin Loftsdottir Christopher Loperena Keisha Khan Y Perry Jemima Pierre Jean Muteba Rahier Laurence Ralph Renya K Ramirez Junaid Rana Joshua Reno Jonathan Rosa Shalini Shankar and Maria Styve **Racial Segregation and Eugenical Science Between the Wars** Michael L.

Blakey, 2025-07-18 This volume examines the rise and decline of racial science and its relationship to the political and social imposition of Jim Crow in the American South a racialized code of laws grounded upon an inherently racist and prejudicial pseudoscience The author argues here that the study of human beings within the emerging 18th and 19th century institutions of Western science was corrupted by the limited social intuitions of its enslaving colonizing and elitist members Western science and White societies plowed forward in continued ideological adherence to a biodeterministic imagination to justify slavery then Jim Crow racial segregation immigration restriction and other deadly and exploitative eugenical solutions of Social Darwinist thought The story is further complexified by the countervailing theories and voices of Black and Jewish intellectuals in the social and biocultural sciences in the 19th and 20th centuries such as Frederick Douglass W E B Du Bois and Montague Cobb These had profound consequences not only for the social sciences but also for the cultural life of Black Americans in the aftermath and afterlife of slavery At the same time even here the author discloses that the racialized dimensions of social science could not be fully exorcised as social science continued to construct soft line racism in that it selectively primitivized darker people and omitted White racism and colonialism from their human story African American social scientists and historians brought White racism and Black modernity to the fore Eugenics had begun to paint marginal White people Jewish and Italian immigrants to the United States as natural inferiors to Nordics or Aryans with devastating consequences in World War II Europe As the War ended the world community began its turn against racism in science and society In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies *The Alternative Introduction to Biological*

Anthropology Jonathan Marks, 2011 In *The Alternative Introduction to Biological Anthropology* author Jon Marks presents an innovative framework for thinking about the major issues in the field with fourteen original essays designed to correlate to

the core chapters in standard textbooks Each chapter draws on and complements but does not reconstitute except for the sake of clarity the major data and ideas presented in standard texts Marks explores such topics as how we make sense of data about our origins where our modern ideas come from our inability to separate natural facts from cultural facts and values as we try to understand ourselves and the social and political aspects of science as a culturally situated mental activity Features Offers clear intelligent and completely original discussions injected with a sense of humor that will keep students reading Addresses core topics in a way that does not simply mirror what is in the basic textbooks but offers a new spin thereby fostering critical thinking Complements traditional textbooks in biological anthropology and explores connections between biological and general anthropology Provides expert integration of topics coherent narratives and salient examples Utilizes theme statements at the start of each chapter that introduce the breadth of information covered and engage students in the material

Anthropology and Slavery at the Dawn of White Supremacy Michael L. Blakey, 2025-07-18 This volume examines biological and cultural data that debunk a primordial basis for racism It tracks the ancient history of all social inequity to agricultural and feudal societies The book then focuses on social and ideological developments in European societies associated with religious justifications for the enslavement of others The European Enlightenment built upon those prejudices with ideas about nature and acceptable natural causes of unequal social status for people newly classified into biological races Nineteenth century anthropology is critiqued by African diasporic scholars who are the first Americans to argue that nurture rather than nature is responsible for human variation The American Civil War brought slavery nearly to an end but racist science continued to grow as eugenics applied to justify otherwise unjustifiable structures of human inequality such as Jim Crow segregation as though they are morally sound In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies

The Genealogical Science Nadia Abu El-Haj, 2012-04-26 This volume analyses the scientific work and social implications of the flourishing field of genetic history The author examines genetic history's working assumptions about culture and nature identity and biology and the individual and the collective

Rethinking Human Evolution Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its

disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology s history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizzio Mc Manus Apurva Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit

50 Great Myths of Human Evolution John H. Relethford, 2017-01-17 50 Great Myths of Human Evolution uses common misconceptions to explore basic theory and research in human evolution and strengthen critical thinking skills for lay readers and students Examines intriguing yet widely misunderstood topics from general ideas about evolution and human origins to the evolution of modern humans and recent trends in the field Describes what fossils archaeology and genetics can tell us about human origins Demonstrates the ways in which science adapts and changes over time to incorporate new evidence and better explanations Includes myths such as Humans lived at the same time as dinosaurs Lucy was so small because she was a child Our ancestors have always made fire and There is a strong relationship between brain size and intelligence Comprised of stand alone essays that are perfect for casual reading as well as footnotes and references that allow readers to delve more deeply into topics

Unmarking Whiteness and the New American Racism Michael L. Blakey, 2025-07-18 This book criticizes recent performative solutions to racism diversity programs at universities for example and White people's fragility or intolerance of mature criticism These ideas are locked in an intellectually gated and defensive conversation that effectively denies the ongoing particular abuses of White supremacy This book instead proposes expensive educational and economic changes including reparations as necessary to achieve real equity Once imputed by the eugenical effects of World War II and the Civil Rights Movement's opposition to White racism the word race was largely stricken from scientific writing But biological determinism remained deeply ensconced in an institution of science that assumed the natural world to be determining making natural science its most authoritative means Authoritative heritability estimates and genetic correlations though spurious continued to imply that obvious racial and class inequalities including their dire health effects were natural and acceptable White people often attempted to unmark their racial identity and assumed that of the uniquely normal people as though an act of anti racism Frankenberg shows On the contrary it served to deny their skin color privileges while enjoying benefits of ongoing structural racism as the only real complete human beings in the room This book uses an ethnology of anthropology to show White people's equivocal views of other's equality in their formal analyses museum collections and exhibitions and treatment of colleagues in recent times They remained deliberately deaf to critical African diasporic scholarship Thus Unmarking gives an anthropological analysis of the social history of White supremacy and shows what it is like for some to confront it In constructing this historical and sociological counternarrative the author provides a critical new social history that illuminates a tangled and turgid past for contemporary readers students and researchers with vital insights for anthropology sociology history cultural studies philosophy and American studies *Verbs, Bones, and Brains* Agustín Fuentes, Aku Visala, 2017-01-15 A benchmark collection of essays on the contemporary understanding of human nature engaging biology and anthropology to theology and philosophy Robin W Lovin Cary M Maguire University Professor of Ethics emeritus Southern Methodist University author of What Do We Do When No One is Listening Leading the Church in a Polarized Society The last few decades have seen an unprecedented surge of empirical and philosophical research into the evolutionary history of Homo sapiens the origins of the mind brain and human culture This research has sparked heated debates about the nature of human beings and how knowledge about humans from the sciences and humanities should be properly understood The goal of Verbs Bones and Brains Interdisciplinary Perspectives on Human Nature is to engage these themes and present current debates discussions and discourse for a range of readers The contributors bring the discussion to life with key experts outlining major concepts paired with cross disciplinary commentaries in order to create a novel approach to thinking about and with human natures Throughout they emphasize the importance of seeking a convergence in our views on human nature despite metaphysical disagreements They caution that if convergence eludes us and a common ground cannot be found this is itself a relevant result it would reveal to us how deeply our questions about ourselves are

connected to our basic metaphysical assumptions. Instead, their focus is on how the interdisciplinary and possibly transdisciplinary conversation can be enhanced in order to identify and develop a common ground on what constitutes human nature. A landmark volume. It shows the fruitfulness of a mutually respectful and yet rigorous approach to cross disciplinary engagement. William Storrar, Center of Theological Inquiry, Princeton, NJ, editor of *A World for All*, Global Civil Society in Political Theory and Trinitarian Theology. Fascinating, well organized and well edited. Choice

Biological Anthropology and Ethics Trudy R. Turner, 2012-02-01. Biological anthropologists face an array of ethical issues as they engage in fieldwork around the world. In this volume, human biologists, geneticists, paleontologists, and primatologists confront their involvement with and obligations to their research subjects, their discipline, society, and the environment. Those working with human populations explore such issues as who speaks for a group, community consultation and group consent, the relationship between expatriate communities and the community of origin, and disclosing the identity of both individuals and communities. Those working with skeletal remains discuss issues that include access to and ownership of fossil material. Primatologists are concerned about the well-being of their subjects in laboratory and captive situations and must address yet another set of issues regarding endangered animal populations and conservation in field situations. The first comprehensive account of the ethical issues facing biological anthropologists today. *Biological Anthropology and Ethics* opens the door for discussions of ethical issues in professional life. Resources in Education, 1984

The Dialectical Primatologist Nicholas Malone, 2021-10-24. *The Dialectical Primatologist* identifies the essential parameters vital for the continued coexistence of hominoids, apes, and humans, synthesising primate research and conservation in order to develop culturally compelling conservation strategies required for the facilitation of hominoid coexistence. As unsustainable human activities threaten many primate species with extinction, effective conservation strategies for endangered primates will depend upon our understanding of behavioural response to human-modified habitats. This is especially true for the apes, who are arguably our most powerful connection to the natural world. Recognising the inseparability of the natural and the social, the dialectical approach in this book highlights the heterogeneity and complexity of ecological relationships. Malone stresses that ape conservation requires a synthesis of nature and culture that recognises their inseparability in ecological relationships that are both biophysically and socially formed and seeks to identify the pathways that lead to either hominoid coexistence or alternatively extinction. This book will be of keen interest to academics in biological anthropology, primatology, environmental anthropology, conservation, and human-animal studies.
