Generative AI Ravindra Das, 2024-10-10 The cybersecurity landscape is changing for sure For example one of the oldest threat variants is that of phishing It evolved in the early 1990s but even today it is still being used as a primary threat variant and has now become much more sophisticated covert and stealthy in nature For example it can be used to launch ransomware social engineering and extortion attacks The advent of Generative AI is making this much worse For example a cyberattacker can now use something like ChatGPT to craft the content for phishing emails that are so convincing that it is almost impossible to tell the difference between what is real and what is fake This is also clearly evident in the use of deepfakes where fake images of real people are replicated to create videos to lure unsuspecting victims to a fake website But Generative AI can also be used for the good to combat Phishing Attacks This is the topic of this book In this we cover the following A review of phishing A review of AI Neural Networks and Machine Learning A review of Natural Language Processing Generative AI and the Digital Person A proposed solution as to how Generative AI can combat phishing attacks as they relate to Privileged Access accounts

The Publishers Weekly, 1884

Programming Languages and Systems Chung-Kil Hur, 2023-11-22 This book constitutes the refereed proceedings of the 21st Asian Symposium on Programming Languages and Systems APLAS 2023 held in Taipei Taiwan during November 26-29, 2023 The 15 full papers included in this book are carefully reviewed and selected from 32 submissions They were organized in topical sections as follows semantics logics and foundational theory design of languages type systems and foundational calculi domain specific languages compilers interpreters and abstract machines program derivation synthesis and transformation program analysis verification and model checking logic constraint probabilistic and quantum programming software security concurrency and parallelism tools and environments for programming and implementation and applications of SAT/SMT to programming and implementation

Shihata,2015-05-02 If you are left with a relationship that feels like it s about to implode and you are sure it s unsavable you will want to read this book before you make any final decisions This is a book packed with valuable information to restore your relationship or marriage to a healthy state of being This is a book designed for the person that s ready to give it one last shot You ll be impressed at what you find Discover how you can fix your broken relationship sexless marriage forgiveness and the threats you need to know that causes marriage problems also learn how to reconnect with your partner through communication and the relationship values you need to understand *Pursuit of Pattern Languages for Societal Change -*

PURPLSOC Sickinger, Richard,Baumgartner, Peter,Gruber-Mücke, Tina,2018-12-18 We live in a time of social and cultural change Old patterns are losing their validity and relevance new patterns are needed and in demand We need a new approach which can formulate generate and engage such patterns The pattern language approach of Christopher Alexander serves this purpose the interdisciplinary and participatory building blocks for societal change The PURPLSOC 2017 conference contributions cover 25 domains from anthropology and automation to political science and systems science for a comprehensive perspective of current pattern research and practice *Calculated Bets* Steven S. Skiena,2001-08-06 This is

a book about a gambling system that works It tells the story of how the author used computer simulations and mathematical modeling techniques to predict the outcome of jai alai matches and bet on them successfully increasing his initial stake by over 500% in one year His results can work for anyone at the end of the book he tells the best way to watch jai alai and how to bet on it With humour and enthusiasm Skiena details a life long fascination with computer predictions and sporting events Along the way he discusses other gambling systems both successful and unsuccessful for such games as lotto roulette blackjack and the stock market Indeed he shows how his jai alai system functions just like a miniature stock trading system Do you want to learn about program trading systems the future of Internet gambling and the real reason brokerage houses don t offer mutual funds that invest at racetracks and frontons How mathematical models are used in political polling The difference between correlation and causation If you are curious about gambling and mathematics odds are this book is for you **Intelligent Agents VII. Agent Theories Architectures and Languages** Cristiano Castelfranchi,Yves

Lesperance,2003-07-31 Intelligent agents are one of the most important developments in computer science of the past decade Agents are of interest in many important application areas ranging from human computer interaction to industrial process control The ATAL workshop series aims to bring together researchers interested in the core micro aspects of agent technology Speci cally ATAL addresses issues such as theories of agency software architectures for intelligent agents methodologies and programming languages for r lizing agents and software tools for applying and evaluating agent systems One of the strengths of the ATAL workshop series is its emphasis on the synergies between theories languages architectures infrastructures methodologies and formal methods This year s workshop continued the ATAL trend of attracting a large number of high quality submissions In more detail 71 papers were submitted to the ATAL 2000 workshop from 21 countries

After stringent reviewing 22 papers were accepted for publication and appear in these proceedings As with previous workshops in the series we chose to emphasize what we perceive as important new themes in agent research This year the themes were both associated with the fact that the technology of intelligent agents and multi agent systems is beginning to migrate from research labs to software engineering centers As agents are deployed in applications such as electronic commerce and start to take over responsibilities for their human users techniques for controlling their autonomy become crucial As well the availability of tools that facilitate the design and implementation of agent systems becomes an important factor in how rapidly the technology will achieve widespread use

Trust, Privacy and Security in Digital Business

Javier Lopez, Simone Fischer-Hübner, Costas Lambrinoudakis, 2017-08-11 This book constitutes the refereed proceedings of the 14th International Conference on Trust Privacy and Security in Digital Business TrustBus 2017 held in Lyon France in August 2017 in conjunction with DEXA 2017 The 15 revised full papers presented were carefully reviewed and selected from 40 submissions The papers are organized in the following topical sections Privacy in Mobile Environments Transparency and Privacy Enhancing Technologies Security Measures Cloud IoT Security and Privacy Security Awareness and Social Engineering Policy Languages

Family Language Learning

Christine Jernigan, 2015 Family Language Learning is a practical guide designed to support advise and encourage any parents who are hoping to raise their children bilingually It is unique in that it focuses on parents who are not native speakers of a foreign language It gives parents the tools they need to cultivate and nurture their own language skills while giving their children an opportunity to learn another language The book combines cutting edge research on language exposure with honest and often humorous stories from personal interviews with families speaking a foreign language at home By dispelling long held myths about how language is learned it provides hope to parents who want to give their children bilingual childhoods but feel they don't know where to start with learning a foreign language

The Secret Life of Literature

Lisa Zunshine, 2022-03-15 An innovative account that brings

together cognitive science ethnography and literary history to examine patterns of mindreading in a wide range of literary works For over four thousand years writers have been experimenting with what cognitive scientists call mindreading constantly devising new social contexts for making their audiences imagine complex mental states of characters and narrators In *The Secret Life of Literature* Lisa Zunshine uncovers these mindreading patterns which have until now remained invisible to both readers and critics in works ranging from *The Epic of Gilgamesh* to *Invisible Man* Bringing together cognitive science ethnography and literary studies this engaging book transforms our understanding of literary history Central to Zunshine's argument is the exploration of mental states embedded within each other as for instance when Ellison's *Invisible Man* is aware of how his white Communist Party comrades pretend not to understand what he means when they want to reassert their position of power Paying special attention to how race class and gender inform literary embeddings Zunshine contrasts this dynamic with real life patterns studied by cognitive and social psychologists She also considers community specific mindreading values and looks at the rise and migration of embedding patterns across genres and national literary traditions noting particularly the use of deception eavesdropping and shame as plot devices Finally she investigates mindreading in children's literature Stories for children geared toward different stages of development she shows provide cultural scaffolding for initiating young readers into a long term engagement with the secret life of literature
