Abstract: This study examined the effects of a 12-week, 100% bodyweight resistance training program on the strength and body composition of 12 sedentary, middle-aged men. The program consisted of three sessions per week, each targeting a different muscle group. The results showed that the program significantly increased muscle strength and reduced body fat percentage. The findings suggest that a 12-week, 100% bodyweight resistance training program is an effective means of improving strength and body composition in sedentary, middle-aged men.
