Student Voice in Mathematics Classrooms around the World Berinderjeet Kaur, Glenda Anthony, Minoru Ohtani, David Clarke, 2013-09-06

The Learner's Perspective Study ascribes to the premise that the investigation of social practice within the mathematics classrooms must attend to the learners practice with at least the same priority as that accorded to the teachers practice. In focusing on student voice within this partnership as enacted in many different guises across different cultures and socio political learning environments we hope that we will be better informed to understand the relationship between pedagogy and learning mathematics and between pedagogy and the empowerment of diverse learners. Research findings from the Learner's Perspective Study reported in this book and its companion volumes affirm just how culturally situated are the practices of classrooms around the world and the extent to which students are collaborators with the teacher complicit in the development and enactment of patterns of participation that reflect individual societal and cultural priorities and associated value systems. In this book we attend closely to this collaboration with our focus on the voice of the student. Collectively the authors consider how the deliberate inclusion of student voice can be used to enhance our understandings of mathematics classrooms of mathematics learning and of mathematics outcomes for students in classrooms around the world. The Learner's Perspective Study aims to juxtapose the observable practices of the classroom and the meanings attributed to those practices by classroom participants. The LPS research design documents sequences of at least ten lessons using three video cameras supplemented by the reconstructive accounts of classroom participants obtained in post lesson video stimulated interviews.
