Leadership Approaches to Negotiate Challenges in a Changing Education Landscape

Leentjie van Jaarsveld, Kobus Mentz, Charl C. Wolhuter, 2020-12-31 The argumentative point of departure of this scholarly book is the common conviction of specialists in the field of education in South Africa that the national education system is not at a satisfactory level in both the academic and the public discourse Such allegations are made and frequently stronger adjectives than non satisfactory are used Results of international test series in which South Africa has participated such as the 2015 TIMSS tests confirm the negative verdicts found in the public and scholarly discourse This book aims to argue that although the lack of performance could be attributed to a multiplicity of factors one factor that can make a difference in the achievement levels obtained by learners in schools is leadership The book demonstrates that a particular problem of both the scholarly and the public discourse on education in South Africa is an overtone of defeatism or resignation blaming all ills in the education system and educational institutions on historical legacies and or contextual factors such as socio economic deprivation in the catchment areas of schools or poor resources and infrastructure This collected work was inspired by a recently published spate of articles on top performing schools including top performing schools in rural communities in which it was demonstrated that good leadership can overcome such contextual and other challenges The book unpacks the issue of leadership in South African schools from a variety of perspectives thus contributing to the development of the scholarly discourse on Educational Leadership in South Africa The target audience of the book is scholars of Educational Leadership The research reported in the chapters draw on a wide range of methodologies including empirical survey research questionnaires and interviews critical literature surveys and the comparative method

Research for Educational Change Jill Adler, Anna Sfar, 2016-06-17 Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching the question of how these effects are to be generated and sustained is far from evident The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal about what can be done and how so that its research generated insights have a tangible beneficial impact on what is happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of researchers communicating their insights to those responsible for educational practice the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education educational research and classroom practices This book will be key reading for postgraduates researchers and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research

Discipline in Education Johan Botha, 2021 This book addresses a perennial challenge to the success of the South African education system namely discipline This volume steers the interrogation of discipline in a new direction reflecting on ways in which recent research can benefit South African schools This includes the need for alternative discipline that will enhance education The scholarly contribution lies in its in depth exploration of the relevance of research findings to South African schools and to the twenty first century socio political environment For the first time scholarly interrogation of the issue of learner discipline in South African schools draws on indigenous knowledge systems Its post colonial and decolonial perspectives offer an ethical and moral compass for behaviour that could contribute to the well being of South African society and other societies similarly afflicted by anti social behaviour The book offers a range of perspectives on the debates on discipline and associated issues and should stimulate future discussions on discipline and indiscipline at a time when South Africa and many other societies engage with the effects of social and political transformation This scholarly book is aimed at academics and researchers The contributors include philosophers moralists corporativists education law specialists curriculum specialists specialists in education and culture advocates of ubuntu and people using meta syntheses of approaches and practices and religious practices such as a Christian ethical moral approach to parental and school discipline They draw on their insights into postcolonialism the impact of indigenous knowledge theories of agency dysfunctionality and school underperformance The book offers an intriguing

depiction of opposing views on discipline *Improving Primary Mathematics Education, Teaching and Learning* Mellony Graven, Hamsa Venkat, 2017-01-19 This book focuses on how to improve the teaching and learning of primary level mathematics education within resource constrained contexts It builds on two large numeracy projects within South Africa which speak to broader global concerns and highlight how research and development not only enables one to meet ethical imperatives but also explore how further interventions can be developed Teacher and research communities must work together to create mutually beneficial relationships and establish a cohesive understanding of the requirements of primary mathematics education **Problem Solving in the Mathematics Classroom** Ana Kuzle, Benjamin Rott, Tatjana Hodnik Cadez, 2016-06-30 Problem solving is a cornerstone of the school mathematics curricula in many countries as it is an essential part of mathematical knowledge and performance Implementation of problem solving in school mathematics is also important for meeting society's needs with respect to work school and life as well as for stimulating the interest and enthusiasm of students Countries such as Finland Germany Hungary and Slovenia have a long tradition of problem solving in school mathematics Each country has faced its own specific challenges when adopting problem solving as a constituent part of school mathematics But through this process they have gained experience and discovered chances for integrating problem solving into mathematics lessons The heart of achieving this mission lies in choosing good mathematical problems Good mathematical problems are those that are not too difficult and not too easy are interesting challenging and mathematically rich They should invite students to conjecture and to explore different strategies support extending their existing knowledge and allow for problem extension In this book the reader will find such rich mathematical problems targeting students at different school levels that can help cultivate a problem solving culture The book provides the coherence and direction from different perspectives that practitioners need when integrating problem solving into their teaching practices and using problem solving to teach mathematics We believe that the processes which accompany problem solving contribute to both the development of students mathematical reasoning and to the development of their sense of autonomy *Accountability in education: meeting our commitments* UNESCO, 2017-10-30 The second edition of the Global Education Monitoring Report GEM Report presents the latest evidence on global progress towards the education targets of the UN Sustainable Development Goals With hundreds of millions of people still not going to school and many not achieving minimum skills at school it is clear education systems are off track to achieve global goals The marginalized currently bear the most consequences but also stand to benefit the most if policy makers pay sufficient attention to their needs Faced with these challenges along with tight budgets and increased emphasis on results oriented value for money countries are searching for solutions Increased accountability often tops the list The 2017 8 GEM Report shows the entire array of approaches to accountability in education It ranges from countries unused to the concept where violations of the right to education go unchallenged to countries where accountability has become an end in itself instead of a means to inclusive equitable and

high quality education and lifelong learning for all The report emphasizes that education is a shared responsibility While governments have primary responsibility all actors schools teachers parents students international organizations private sector providers civil society and the media 0 3 have a role in improving education systems The report emphasized the importance of transparency and availability of information but urges caution in how data are used It makes the case for avoiding accountability systems with a disproportionate focus on narrowly defined results and punitive sanctions In an era of multiple accountability tools the report provides clear evidence on those that are working and those that are not Back cover

Democratic Evaluation and Democracy Donna Podems, 2017-02-01 Democratic evaluation brings a way of thinking about evaluation s role in society and in particular its role in strengthening social justice Yet the reality of applying it and what happens when it is applied particularly outside the West is unclear Set in South Africa a newly formed democracy in Southern Africa the book affords an in depth journey that immerses a reader into the realities of evaluation and its relation to democracy The book starts with the broader introductory chapters that set the scene for more detailed ones which bring thorough insights into national government local government and civil societies experience of evaluation democratic evaluation and their understanding of how it contributes to strengthening democracy or not A teaching case the book concludes by providing guiding questions that encourage reflection discussion and learning that ultimately aims to inform practice and theory *Cross-nationally Comparative, Evidence-based Educational Policymaking and Reform* Alexander W.

Wiseman, Petrina M. Davidson, 2018-06-29 In this volume scholars and policymakers examine how large scale assessments and quantitative data are used to inform policy making at all levels of education worldwide and how data can be used to better understand specific national and regional educational challenges
