Study of the human organism and how it works

Anatomy

The study of the structure of the human body

Physiology

The study of the function of the human body

Structural levels

How the body is organized, from the smallest to the largest and most complex

- 1. Chemical level - atoms and molecules
- 2. Cellular level - cells and tissues
- 3. Tissue level - groups of cells
- 4. Organ level - organs and systems
- 5. System level - systems of organs
- 6. Organism level - the whole body

CELLS AND TISSUES

Cells are the basic units of structure and function

Organization of cellular levels

Cells are organized into tissues

Tissues are organized into organs

Organs are organized into systems

Systems are organized into the whole body

The whole body is organized into the human organism

The nucleus is the control center of the cell

It contains the cell's DNA and controls the cell's activities

The nucleus is surrounded by a nuclear envelope

The nuclear envelope is made of two layers of phospholipids

It has nuclear pores that allow materials to enter and leave the nucleus

The nucleus is the site of DNA replication and protein synthesis

NERVOUS SYSTEM

Functions

- 1. Sensory - receive information from the environment
- 2. Integrative - process information and make decisions
- 3. Motor - respond to information and control the body

Structure

The nervous system is made of neurons and glial cells

Neurons are the cells that send and receive information

Glial cells support and protect neurons

The nervous system is divided into the central nervous system (CNS) and the peripheral nervous system (PNS)

The CNS is made of the brain and spinal cord

The PNS is made of all the other nerves

NERVOUS SYSTEM

The nervous system is made of neurons and glial cells

Types of neurons

1. Sensory - receive information from the environment

2. Motor - respond to information and control the body

3. Interneurons - process information and make decisions

of the student's knowledge of the CTL medical requirements. This study guide reflects the hybrid nature of the USSOCOM certification examination. Where applicable, SOF medical requirements and standards have been merged with the DOT-based curriculum. The DOT Civilian standards of care are always applicable to the military, but there may be times when it is difficult to achieve. Many questions on the examination will be appropriate in either setting. Where so there has been an attempt both on the examination and in this study guide to differentiate the standard of care in the pertinent setting. The ATP student will find that like the Department of Transportation's Curriculum and the National Registry's Certification program and any other Medical Certification process, most of the material covered within the pages of this study guide will be covered during the student's formal phase of instruction. However, some of it may not. The student must recognize that not all subject material can be taught in a formal setting. It is the ATP student's responsibility to use this study guide to complement their formal instruction in preparation to successfully pass the USSOCOM ATP Certification Examination.
