

# THE CHEMISTRY OF LIFE

Living matter is composed of many different elements that are made up of small units called atoms. An atom of any element has a nucleus that is surrounded by particles called electrons. Each electron has a negative charge. A nucleus usually has two types of particles, protons and neutrons. Each proton has a positive charge. Neutrons have no charge. The number of protons in a nucleus of atom is called its atomic number. When you add up the number of protons and neutrons together, you get what is called the atomic mass. The chart below shows six elements that make up most of your body.

*Use this information about atoms and the facts in the chart to answer the questions that follow the chart.*

| Element    | Element Symbol | Atomic number | Atomic mass | Percent in the human body |
|------------|----------------|---------------|-------------|---------------------------|
| Hydrogen   | H              | 1             | 1           | 9.5                       |
