

IV. Developmental Aspects of the Nervous System

TYPES OF CEREBRAL PALSY

Cerebral refers to the affected area of the brain, the cerebrum, and palsy refers to disorder of movement. Cerebral palsy is caused by damage to the motor control centers of the young developing brain and can occur during pregnancy, during childbirth, or after birth up to about age three.

- A. The nervous system begins to form in the first month of embryonic development. Therefore maternal and environmental factors may impair brain development. Mothers that smoke impair the bodies ability to carry oxygen sufficiently which increased the chances of oxygen deprivation to the babies brain cells that are forming. Other severe congenital brain disorders include cerebral palsy which is thought to be caused by a temporary lack of oxygen during delivery. Furthermore, premature babies have trouble regulating their temperature because the hypothalamus is one of the last brain areas to mature prenatally.
- B. The development of motor control indicates the progressive myelination and maturation of a child's nervous system.

Zimmerman, Susan L. Connors, 2010-09-08 Novel Approaches into the Origins of Neurodevelopmental Disorders The Fetal Physiology Foundation Over the past two decades autism a neurodevelopmental disorder that is defined by behavior and was once believed to be rare became recognized in increasing numbers of children and recently received distinction as an epidemic 1 While numbers of affected children have steadily increased our knowledge is still insufficient to explain autism's diverse causes and broad range of presentations Despite remarkable progress in research available medical diagnostic testing applies only to a small minority of affected children Thus scientifically based explanations with which physicians can diagnose and treat the majority of children with autism and advise their parents are quite limited Our society and scientific community were unprepared for the rise in autism which explains our present inability to understand most of its causes Researchers in neurodevelopmental disorders have long been aware of other disorders that despite extensive efforts have not yielded clear genetic or environmental origins and autism has become symbolic of the need for new approaches to research into these complex conditions Although autism has captured our attention in recent years the prevalence of other neurodevelopmental disorders such as attention deficit hyperactivity disorder ADHD and bipolar disorder among others also has been increasing 2 4
