Database Repairing and Consistent Query Answering Leopoldo Bertossi, 2022-05-31 Integrity constraints are semantic conditions that a database should satisfy in order to be an appropriate model of external reality. In practice and for many reasons a database may not satisfy those integrity constraints and for that reason it is said to be inconsistent. However, and most likely, a large portion of the database is still semantically correct in a sense that has to be made precise. After having provided a formal characterization of consistent data in an inconsistent database, the natural problem emerges of extracting that semantically correct data as query answers. The consistent data in an inconsistent database is usually characterized as the data that persists across all the database instances that are consistent and minimally differ from the inconsistent instance. Those are the so-called repairs of the database. In particular, the consistent answers to a query posed to the inconsistent database are those answers that can be simultaneously obtained from all the database repairs. As expected, the notion of repair requires an adequate notion of distance that allows for the comparison of databases with respect to how much they differ from the inconsistent instance. On this basis, the minimality condition on repairs can be properly formulated. In this monograph, we present and discuss these fundamental concepts, different repair semantics, algorithms for computing consistent answers to queries, and also complexity theoretic results related to the computation of repairs and doing consistent query answering. Table of Contents: Introduction, The Notions of Repair and Consistent Answer, Tractable CQA and Query Rewriting, Logically Specifying Repairs, Decision Problems in CQA, Complexity and Algorithms, Repairs and Data Cleaning. **Flexible Query Answering Systems** Troels Andreasen, 2002-10-14 This book constitutes the refereed proceedings of the 5th International Conference on Flexible Query Answering Systems FQAS 2002 held in Copenhagen, Denmark, in October 2002. Logical Foundations for Cognitive Agents Hector J. Levesque,Fiora Pirri,2012-12-06 It is a pleasure and an honor to be able to present this collection of papers to Ray Reiter on the occasion of his 60th birthday To say that Ray s research has had a deep impact on the field of Artificial Intel ligence is a considerable understatement Better to say that anyone thinking of do ing work in areas like deductive databases default reasoning diagnosis reasoning about action and others should realize

that they are likely to end up proving corollaries to Ray's theorems. Sometimes studying related work makes us think harder about the way we approach a problem. Studying Ray's work is as likely to make us want to drop our way of doing things and take up his. This is because more than a mere visionary, Ray has always been a true leader. He shows us how to proceed not by pointing from his armchair but by blazing a trail himself, setting up camp and waiting for the rest of us to arrive. The International Joint Conference on Artificial Intelligence clearly recognized this and awarded Ray its highest honor, the Research Excellence award, in 1993, before it had even finished acknowledging all the founders of the field. The papers collected here sample from many of the areas where Ray has done pioneering work. One of his earliest areas of application was databases, and this is reflected in the chapters by Bertossi et al. and the survey chapter by Minker.
