Perspectives Kinga Morsanyi, Irene Cristina Mammarella, Denes Szűcs, Carlo Tomasetto, Caterina Primi, Erin Anne
 Maloney, 2017-01-19 Mathematical anxiety is a feeling of tension apprehension or fear which arises when a person is faced
 with mathematical content The negative consequences of mathematical anxiety are well documented Students with high
 levels of mathematical anxiety might underperform in important test situations they tend to hold negative attitudes towards
 mathematics and they are likely to opt out of elective mathematics courses which also affects their career opportunities
 Although at the university level many students do not continue to study mathematics social science students are confronted
 with the fact that their disciplines involve learning about statistics another potential source of anxiety for students who are
 uncomfortable with dealing with numerical content Research on mathematical anxiety is a truly interdisciplinary field with
 contributions from educational developmental cognitive social and neuroscience researchers The current collection of papers
 demonstrates the diversity of the field offering both new empirical contributions and reviews of existing studies The
 contributors also outline future directions for this line of research **Australian Education Index** ,1980
