Complexity and Simplicity in Science Education David Geelan, Kim Nichols, Christine V. McDonald, 2022-01-25 This edited volume brings together a broad range of international science education studies focusing on the interplay of teaching and learning science. It recognizes the complexity present in today's education associated with major science-related issues faced by society such as climate change, diseases, and pandemics, global conflicts over energy, food, and water. The studies discussed in this volume are focused on presenting different opportunities to teach these convoluted matters in order to find simplicity within the complexity and make it accessible to learners. They bring together the challenges of preparing the students of today to become scientifically informed citizens of tomorrow.

Universal Design for Learning in Physical Education Lauren J. Lieberman, Michelle Grenier, Ali Brian, Katrina Arndt, 2021 This groundbreaking text describes how general and adapted PE teachers can implement universal design for learning (UDL) to create units and lesson plans that are accessible to all students. Numerous ready-to-use plans, rubrics, and examples will help teachers follow best practices in inclusion.

Physics Education and Gender Allison J. Gonsalves, Anna T. Danielsson, 2020-04-24 This Edited Volume engages with concepts of gender and identity as they are mobilized in research to understand the experiences of learners, teachers, and practitioners of physics. The focus of this collection is on extending theoretical understandings of identity as a means to explore the construction of gender in physics education research. This collection expands an understanding of gendered participation in physics from a binary gender deficit model to a more complex understanding of gender as performative and intersectional with other social locations, e.g., race, class, LGBT status, ability, etc. This volume contributes to a growing scholarship using sociocultural frameworks to understand learning and participation in physics and that seeks to challenge dominant understandings of who does physics and what counts as physics competence. Studying gender in physics education research from a perspective of identity and identity construction allows us to understand participation in physics cultures in new ways. We are able to see how identities shape and are shaped by inclusion and exclusion in physics practices, discourses that dominate physics cultures, and actions that maintain or challenge structures of dominance and subordination in physics education. The chapters offered in this book focus on understanding identity and its usefulness in various contexts with various learner or practitioner populations. This scholarship collectively presents us with a broad picture of the complexity inherent in doing physics and doing gender.
