High-Level Adaptation and Aftereffects Rocco Palumbo, Stefania D'Ascenzo, Luca Tommasi, 2017-04-28 Aftereffects generally occur after a prolonged exposure adaptation to a first stimulus possessing one given property followed by presentation of a stimulus bearing a neutral value of that property The aftereffect consists in a change in appearance of the neutral stimulus following the adapter compared to the appearance of the neutral stimulus when it is perceived without any previous exposure to the adapter The transient phenomena of perceptual aftereffects are believed to depend on the activation of neuron populations that respond selectively to a given property of the stimuli Studying how adaptation occurs which stimulus properties are sensitive to it which timings are

necessary whether individual differences modulate its occurrence has thus become an indirect way to probe the plasticity of sensory functions in the nervous system recently extending to more cognitive and representational aspects of neural coding In the last two decades indeed it has been demonstrated that aftereffects occur not only for low level properties of stimuli such as motion color or orientation but also for high level properties Many studies have proven that high level proprieties of the stimuli e g gender identity ethnicity or age of a face or a voice are sensitive to this phenomenon It has been shown for example that the prolonged exposure to a female or male face produces a gender misperception in the opposite direction when an androgynous face is shown after the adapter Furthermore recent studies have also shown that aftereffects are not strictly contingent upon the physical features that make up stimuli but they seem to run across the high level proprieties subjects are adapted to These evidences are supported by cross category adaptation studies which underlie how aftereffects occur even across stimuli that do not share physical features e g bodies and faces but that instead share common higher level properties such as gender Given the growing body of research focused on adaptation and aftereffects in high level perception at the boundaries with perceptual learning attention and cognition the purpose of this topic is to provide a picture of the state of the art relative to the specific phenomena of adaptation in high level perceptual processing *Acumenous*

"Code of Massachusetts regulations, 2014" ,2014 Archival snapshot of entire looseleaf Code of Massachusetts Regulations held by the Social Law Library of Massachusetts as of January 2020 **Educating the next generation of scientists** Great Britain: Parliament: House of Commons: Committee of Public Accounts,2011-01-20 A strong supply of people with science technology engineering and maths skills is important for the UK to compete internationally The starting point is a good education for children and young people in science and maths The numbers studying separate GCSE biology chemistry and physics known as Triple Science when studied together have risen by almost 150% between 2004 05 and 2009 10 Attainment has also improved as take up has increased Nevertheless there is a risk that this progress will not be maintained There are still not enough teachers with strong subject knowledge in science and maths entering the profession In 2009 10 there were over 115 000 entries to GCSE biology 113 000 to chemistry and 112 000 to physics Another 40 000 pupils entered A level chemistry and almost 70 000 A level maths If the higher numbers of pupils taking science and maths are to achieve good results they need to be taught by teachers with the specialist knowledge to teach these subjects well Teaching environments are also vitally important in improving take up and achievement in science but there is evidence that science facilities in many schools are unsatisfactory and even unsafe Furthermore in some schools advice and guidance on science and maths related careers is poor The Department must approach the challenge of improving school science and maths through a coherent system wide strategy rather than as a number of initiatives operating in isolation As more autonomy is given to schools the Department must develop an accountability framework that gives schools strong incentives to put all key elements in place for the benefit of their pupils **Motor Skills and Their Foundational Role for Perceptual, Social, and Cognitive Development** Klaus Libertus,Petra Hauf,2017-05-18 Motor skills are a vital part of healthy development and are featured prominently both in physical examinations and in parents baby diaries It has been known for a long time that motor development is critical for children s understanding of the physical and social world Learning occurs through dynamic interactions and exchanges with the physical and the social world and consequently movements of eyes and head arms and legs and the entire body are a critical during learning At birth we start with relatively poorly developed motor skills but soon gain eye and head control learn to reach grasp sit and eventually to crawl and walk on our own The opportunities arising from each of these motor milestones are profound and open new and exciting possibilities for exploration and interactions and learning Consequently several theoretical accounts of child development suggest that

growth in cognitive social and perceptual domains are influenced by infants' own motor experiences. Recently empirical studies have started to unravel the direct impact that motor skills may have on other domains of development. This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development. We hope that these articles will stimulate further research on this interesting question.

National Reflections on the Netherlands

Didactics of Mathematics Marja Van den Heuvel-Panhuizen, 2020-01-06. This open access book inspired by the ICME 13 Thematic Afternoon on European Didactic Traditions consists of 17 chapters in which educators from the Netherlands reflect on the teaching and learning of mathematics in their country and the role of the Dutch domain-specific instruction theory of Realistic Mathematics Education. Written by mathematics teachers, mathematics teacher educators, school advisors and developers and researchers in the field of instructional material, textbooks and examinations, the book offers a multitude of perspectives on important issues in Dutch mathematics education both at primary and secondary school levels. Topics addressed include the theoretical underpinnings of the Dutch approach, the subject of mathematics in the Dutch educational system, teacher education and testing, the history of mathematics education and the use of history in teaching of mathematics, changes over time in subject matter domains and in the use of technology and the process of innovation and how the Dutch and in particular one Dutch institute have worked on the reform.

Handbook of Research on Applied AI for

International Business and Marketing Applications Christiansen, Bryan, Škrinjarčić, Tihana, 2020-09-25.
