Biological Collections National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Life Sciences, Committee on Biological Collections: Their Past, Present, and Future Contributions and Options for Sustaining Them, 2021-01-29 Biological collections are a critical part of the nation's science and innovation infrastructure and a fundamental resource for understanding the natural world. Biological collections underpin basic science discoveries as well as deepen our understanding of many challenges such as global change, biodiversity loss, sustainable food production, ecosystem conservation, and improving human health and security. They are important resources for education both in formal training for the science and technology workforce and in informal learning through schools, citizen science programs, and adult learning. However, the sustainability of biological collections is under threat. Without enhanced strategic leadership and investments in their infrastructure and growth, many biological collections could be lost. *Biological Collections: Ensuring Critical Research and Education for the 21st Century* recommends approaches for biological collections to develop long-term financial sustainability, advance digitization, recruit and support a diverse workforce, and upgrade and maintain a robust physical infrastructure in order to continue serving science and society. The aim of the report is to stimulate a national discussion regarding the goals and strategies needed to ensure that U.S. biological collections not only thrive but continue to grow throughout the 21st century and beyond.

Data and Text Processing for Health and Life Sciences Francisco M. Couto, 2019-06-10 This open access book is a step by step introduction on how shell scripting can help solve many of the data processing tasks that Health and Life specialists face everyday with minimal software dependencies. The examples presented in the book show how simple command line tools can be used and combined to retrieve data and text from web resources, to filter and mine literature, and to explore the semantics encoded in biomedical ontologies. To store data, this book relies on open standard text file formats such as TSV, CSV, XML, and OWL that can be opened by any text editor or spreadsheet application. The first two chapters, Introduction and Resources, provide a brief introduction to the shell scripting and describe popular data resources in Health and Life Sciences. The third chapter, Data Retrieval, starts by introducing a common data processing task that involves multiple data resources. Then, this chapter explains how to automate each step of that task by introducing the required command line tools one by one. The fourth chapter, Text Processing, shows how to filter and analyze text by using simple string matching techniques and regular expressions. The last chapter, Semantic Processing, shows how XPath queries and shell scripting are able to process complex data such as the graphs used to specify ontologies. Besides being almost immutable for more than four decades and being available in most of our personal computers, shell scripting is relatively easy to learn by Health and Life specialists as a sequence of independent commands. Comprehending them is like conducting a new laboratory protocol by testing and understanding its procedural steps and variables and combining their intermediate results. Thus, this book is particularly relevant to Health and Life specialists or students that want to easily learn

how to process data and text and which in return may facilitate and inspire them to acquire deeper bioinformatics skills in the future

Visuospatial Processing for Education in Health and Natural Sciences Juan C. Castro-Alonso, 2019-08-05

Visuospatial processing is key to learn and perform professionally in the domains of health and natural sciences. As such, there is accumulating research showing the importance of visuospatial processing for education in diverse health sciences e.g. medicine, anatomy, surgery and in many natural sciences e.g. biology, chemistry, physics, geology. In general, visuospatial processing is treated separately as a spatial ability and b) working memory with visuospatial stimuli. This book attempts to link these two research perspectives and present visuospatial processing as the cognitive activity of two components of working memory: mostly the visuospatial sketch pad and also the central executive which allows to perform in both spatial ability and working memory tasks. Focusing on university education in the fields of health sciences and natural sciences, the chapters in this book describe the abilities of mental rotation, mental folding, spatial working memory, visual working memory, among others, and how different variables affect them. Some of these variables thoroughly addressed in the book are sex, gender, visualizations, interactivity, cognitive load, and embodiment. The book concludes with a chapter presenting VAR, a battery of computer-based tests to measure different tasks entailing visuospatial processing. With contributions by top educational psychologists from around the globe, this book will be of interest to a broad array of readers across the disciplines.

Biosemiotics and Evolution Elena Pagni, Richard Theisen Simanke, 2022-01-03. This book reviews the evolution of Biosemiotics and gives an outlook on the future of this interdisciplinary new discipline. In this volume, the foundations of symbolism are transformed into a phenomenological, technological, philosophical, and psychological discussion, enriching the readers' knowledge of these foundations. It offers the opportunity to rethink the impact that evolution theory and the confirmations about evolution as a historical and natural fact have had and continues to have today. The book is divided into three parts: Part I: Life, Meaning, and Information; Part II: Semiosis and Evolution; Part III: Physics, medicine, and bioenergetics. It starts by laying out a general historical, philosophical, and scientific framework for the collection of studies that will follow. In the following, some of the main reference models of evolutionary theories are revisited: Extended Synthesis, Formal Darwinism, and Biosemiotics. The authors shed new light on how to rethink the processes underlying the origins and evolution of knowledge, the boundary between teleonomic and teleological paradigms of evolution, and their possible integration, the relationship between linguistics and biological sciences, especially with reference to the concept of causality, biological information, and the mechanisms of its transmission, the difference between physical and biosemiotic intentionality, as well as an examination of the results offered or deriving from the application in the economics and the engineering of design of biosemiotic models for the transmission of culture, digitalization, and proto design. This volume is of fundamental scientific and philosophical interest and seen as a possibility for a dialogue based on theoretical and methodological pluralism. The international nature of the publication, with contributions from all over the world, will allow a further development of

academic relations at the service of the international scientific and humanistic heritage **Dual-use life science research and biosecurity in the 21st Century: Social, Technical, Policy, and Ethical Challenges** Jonathan E.
