2014 Gce Physics Practical:

Current Trends in the Representation of Physical Processes in Weather and Climate Models David A. Randall, J. Srinivasan, Ravi S. Nanjundiah, Parthasarathi Mukhopadhyay, 2019-01-31 This book focuses on the development of physical parameterization over the last 2 to 3 decades and provides a roadmap for its future development. It covers important physical processes: convection, clouds, radiation, land surface, and the orographic effect. The improvement of numerical models for predicting weather and climate at a variety of places and times has progressed globally. However, there are still several challenging areas which need to be addressed with a better understanding of physical processes based on observations and to subsequently be taken into account by means of improved parameterization. And this is all the more important since models are increasingly being used at higher horizontal and vertical resolutions. Encouraging debate on the cloud resolving approach or the hybrid approach with parameterized convection and grid scale cloud microphysics and its impact on models' intrinsic predictability, the book offers a motivating reference guide for all researchers whose work involves physical parameterization problems and numerical models.

Designing Education Policy for Sub-Saharan African Countries Elizabeth Bifuh-Ambe, 2025-01-13 *Designing Education Policy for Sub-Saharan African Countries* is the culmination of five years of extensive research and analysis of global educational systems as they compare with the challenges and opportunities in Sub-Saharan Africa with a lens on Southern Cameroons. As African youths demonstrate purpose and a desire for sovereignty and self-governance, quality education remains critical in realizing these aspirations. Drawing from over 35 years of experience as an educator on various continents, Elizabeth Bifuh Ambe courageously confronts the complex interactions of education with colonialism and other systems that perpetuate inequalities within the continent. She highlights the transformative power of education as a source of cultural pride and a conduit for socio-economic development that is essential if Africa must break free from historical patterns of dependency in the ongoing fight for genuine independence.

Science Identities Henriette Tolstrup Holmegaard, Louise Archer, 2023-01-23 This edited volume brings together a state-of-the-art collection of leading and emergent research on the burgeoning topic of science identities. It sets out how science identity can be productively used as a lens in understanding patterns and inequalities in science participation across different educational and international contexts. Its chapters reveal how intersections of social identities and inequalities shape participation and engagement in science. Particular attention is given to explicating issues of theory and method, identifying the potential and limitations of approaches and lacunae in existing knowledge. The book showcases research from a range of disciplinary areas employing diverse methodological and conceptual approaches to investigate science identities across different fields and settings. The collection offers a rich and comprehensive understanding of how science identity can be used conceptually, methodologically, and analytically to understand how learners and teachers relate to and make sense of science. It is a valuable resource for students, researchers, and academics in the field of science education and anyone who is
