Making Space for Active Learning Anne C. Martin, Ellen Schwartz, 2015-04-28 This powerful collection will inspire new and veteran teachers to make space for children's interests for teaching as relational and intellectual work and for new insights and ideas. The authors introduce the Prospect Center's Descriptive Review of Practice a collaborative inquiry process that provides an opportunity for teachers to examine their practice and gain new perspectives from other participants. The contributors to this volume respond to each child's modes of thinking as they develop curriculum or find wiggle room in curricula they are given. By demonstrating how it is possible to pursue careful knowledge of craft this book offers ways of teaching that allow for continuing growth and change. Book Features An inquiry methodology that assists teachers to reflect on the classroom and develop curriculum that responds to children's interests and needs. Specific examples of a variety of sources teachers can draw on and think about to improve practice. A method of data collection that can inform practice while allowing for the unevenness, messiness and essential humanness of teaching and learning. *Making Space for Active Learning* is a collection that stands alone and gets to the heart of what we mean by learning and teaching. Each contribution reminded me of how much I miss being in the classroom and how much we're missing in current so-called school reform discourse. Keep this book handy. A chapter at a time will restore some needed sanity about what's important. Deborah Meier, author and education activist. This book is a moving and powerful collection of teachers' work that holds the possibility of inspiring and changing new teachers' practice. Kathy Schultz Dean and Professor School of Education Mills College. This book will add significantly to the expanding and important literature about The Prospect Processes which were developed over many years at the Prospect School and Center in Vermont. The chapters all by experienced educators profit from the back and forth between inquiry and stories of classroom life each informing the other. Brenda S. Engel, associate professor, retired Lesley University. **Advances In The History Of Mathematics Education** Alexander Karp, 2022-06-20 This book is a collection of scholarly studies in the history of mathematics education, very abbreviated versions of which were presented at the ICMI Congress in 2021. The book discusses issues in education in Brazil and Belgium, in Poland and Spain, in Russia and the United States. Probably the main factor that unifies the chapters of the book is their attention to key moments in the formation of the field of mathematics education. Topics discussed in the book include the formation and development of mathematics education for women, the role of the research mathematician in the formation of standards for writing textbooks, the formation of curricula and the most active figures in this formation during the New Math period, the formation of certain distinctive features of curricula in Poland, the formation of the views of David Eugene Smith and the influence of European mathematics education on him, the formation of the American mathematics community and the creation of such forms of student assessment as entrance exams to higher educational institutions. The book is of interest not only to historians of mathematics education but also to wide segments of specialists in other areas of mathematics education. *The Life and*

Times of Albert Capo Alfred V. Cafiero, 2014-06-20 The Life and Times of Albert Capo reveals the social economic and cultural atmosphere that existed during the latter two thirds of the twentieth century the immigrant population that lived through the Great Depression of the 1930s faced many challenges the least of which was learning a new language as they slowly integrated themselves into American society Most boys Albert s age did not encounter the peculiar situations or problems that confronted Albert the streets of New York were Albert s playground during his formative years as it was for most boys living in ethnic enclaves throughout the city Living through the Depression and prewar years gave Albert a unique perspective on the rapid change in American society the American landscape looked quite different prior to the nineteenth century there were no electric illumination of homes no telephones radios TVs automobiles or central heating of homes the importance of the twentieth century cannot be overestimated the folks who lived through the twentieth century witnessed more technological advancements inventions and discoveries than the entire past history of mankind Along with scientific discoveries was the fight for civil rights for women as well as minorities two world wars the development of nuclear energy and the atomic bomb the Korean and Vietnam wars and the conquest of outer space by landing a man on the moon It would take many volumes to describe that which has advanced the cause of civilization during the past one hundred years and it would stagger the imagination to ponder the vicissitudes of technology for the next one hundred years and mdash if we don t destroy ourselves in the process [New York Legislative Documents](#) New York (State). Bioscience, 2nd Edition Marco Pellegrini, Marco Antoniotti, Bud Mishra, 2020-03-27 Network science has accelerated a deep and successful trend in research that influences a range of disciplines like mathematics graph theory physics statistics data science and computer science just to name a few and adapts the relevant techniques and insights to address relevant but disparate social biological technological questions We are now in an era of big biological data supported by cost effective high throughput genomic transcriptomic proteomic metabolomic data collection techniques that allow one to take snapshots of the cells molecular profiles in a systematic fashion Moreover recently also phenotypic data data on diseases symptoms patients etc are being collected at nation wide level thus giving us another source of highly related causal big data This wealth of data is usually modeled as networks aka binary relations graphs or webs of interactions including protein protein metabolic signaling and transcription regulatory interactions The network model is a key view point leading to the uncovering of mesoscale phenomena thus providing an essential bridge between the observable phenotypes and omics underlying mechanisms Moreover network analysis is a powerful hypothesis generation tool guiding the scientific cycle of data gathering data interpretation hypothesis generation and hypothesis testing A major challenge in contemporary research is the synthesis of deep insights coming from network science with the wealth of data often noisy contradictory incomplete and difficult to replicate so to answer meaningful biological questions in a quantifiable way using static and dynamic properties of biological networks **Slow Burn** R. Jisung Park, 2025-07-29 How the subtle but significant consequences of a

hotter planet have already begun from lower test scores to higher crime rates and how we might tackle them today It s hard not to feel anxious about the problem of climate change especially if we think of it as an impending planetary catastrophe In *Slow Burn* R Jisung Park encourages us to view climate change through a different lens one that focuses less on the possibility of mass climate extinction in a theoretical future and more on the everyday implications of climate change here and now Drawing on a wealth of new data and cutting edge economics Park shows how climate change headlines often miss some of the most important costs When wildfires blaze what happens to people downwind of the smoke When natural disasters destroy buildings and bridges what happens to educational outcomes Park explains how climate change operates as the silent accumulation of a thousand tiny conflagrations imperceptibly elevated health risks spread across billions of people pennies off the dollar of productivity fewer opportunities for upward mobility By investigating how the physical phenomenon of climate change interacts with social and economic institutions Park illustrates how climate change already affects everyone and may act as an amplifier of inequality Wealthier households and corporations may adapt quickly but without targeted interventions less advantaged communities may not Viewing climate change as a slow and unequal burn comes with an important silver lining It puts dollars and cents behind the case for aggressive emissions cuts and helps identify concrete steps that can be taken to better manage its adverse effects We can begin to overcome our climate anxiety Park shows us when we begin to tackle these problems locally
