Resources and sustainability

1. FIGURE A:

Resources use and sustainability

- **Resources:** things a country can use, such as minerals, fish and timber
- **Natural resources:** resources which come from nature and not manmade
- **Depletion:** reducing by a large amount so that there is not enough left
- **Stock:** the total amount of something that is available to be used

Natural resources

Air, water, sunlight, oil, wood, coal and many others.

Uses of natural resources

Solar power: sunlight is used to create solar energy. Sunshine is a free resource. It is also clean energy because it does not cause pollution.

Wood and coal: natural resources for heating.

Wood is a renewable resource and a form of energy. Because new trees can be grown to replace those that haven't been chopped down.

Renewable resources

- Renewable resources can replace themselves.
- They can be used over and over if used wisely.

Non-renewable resources

- These are resources that can only be used once and do not replace themselves. They can eventually be used up.
- Coal and other minerals, such as gold ore are examples of non-renewable resources.
- When coal is taken out of the ground and burnt it provides heat, however new coal and all minerals take millions of years to form.
