C Application

D HOT* skills including Analysis, Synthesis and Evaluation

* HOT = higher order thinking

The practical tasks range in type from basic skills to investigations in support of LOs 1 and 2. Criterion assessment of groups is usually by rubric, although answers provided to questions could be scored. Assessment of practical work can be more formative or more summative, depending on the placing of the practical work in the learning programme relative to the learning of the theoretical aspects of the topic.

The research project is assessed using the criteria provided in the rubric, with an emphasis on LOs 2 and 3. Although meant to be summative, assessment of this task can be made more formative by providing feedback on plans and drafts. Where learners are working in groups, the teacher could ask them to weight each contribution and distribute scores accordingly. There should be multiple chances to formatively assess learners' work throughout the project. Teachers could develop rubrics for Process, Presentation, Criteria, Research, Teamwork, Persuasiveness, and Analysis and give them to learners.

Rubrics help make your expectations clear to learners. They help the teacher assess a variety of qualities and behaviors by clearly defining or describing the levels of skills from high to low.

Conceptual Profiles Eduardo F. Mortimer, Charbel N. El-Hani, 2014-02-07 The language of science has many words and phrases whose meaning either changes in differing contexts or alters to reflect developments in a given discipline This book presents the authors theories on using conceptual profiles to make the teaching of context dependent meanings more effective Developed over two decades their theory begins with a recognition of the coexistence in the students discourse of those alternative meanings even in the case of scientific concepts such as molecule where the dissonance between the classical and modern views of the same phenomenon is an accepted norm What began as an alternative model of

conceptual change has evolved to incorporate a sociocultural approach by drawing on ideas such as situated cognition and Vygotsky's influential concept of culturally located learning. Also informed by pragmatist philosophy, the approach has grown into a well-rounded theory of teaching and learning scientific concepts. The authors have taken the opportunity in this book to develop their ideas further, anticipate and respond to criticisms that of relativism, for example, and explain how their theory can be applied to analyze the teaching of core concepts in science such as heat and temperature, life and biological adaptation. They also report on the implementation of a research program that correlates the responsiveness of their methodology to all the main developments in the field of science education. This additional material will inform academic discussion, review, and further enhancement of their theory and research model.

The Eighteenth Century James Sambrook, 2014-07-15 This is an impressive and lucid survey of eighteenth-century intellectual life, providing a real sense of the complexity of the age and of the cultural and intellectual climate in which imaginative literature flourished. It reflects on some of the dominant themes of the period, arguing against such labels as Augustan Age, Age of Enlightenment, and Age of Reason, which have been attached to the eighteenth century by critics and historians.

Congressional Record United States Congress, 2004 The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873.
