Unforgettable W. Michael Gray, 2016-10-12 We have an uneasy relationship with the relentless deluge of information gushing out of academia and our media outlets To turn it off is escapist but to attempt to cognitively grapple with it is overwhelming In *Unforgettable* Enabling Deep and Durable Learning a nationally recognized master teacher gives professors and their students the means to chart a clear path through this information explosion Humans crave explanatory patterns and this book enables teachers to think deeply about their academic disciplines to find and articulate their core explanatory principles and to engage their students in a compelling way of thinking An alternative title for this book could be *Why the Best College Teachers Do What They Do* because the author articulates a compelling rationale that will equip faculty to create and deliver transformative courses Students in transformative courses grapple with essential questions and gain mental muscle that equips them for real world challenges

Progressivism in America David B. Woolner, John M. Thompson, 2016 This book is the first to offer a comprehensive overview of progressive politics in America It combines historical analysis policy prescriptions and a survey of the principal challenges Featuring essays by some of the leading scholars analysts and commentators it is indispensable for anyone interested in American politics

Test Fairness in the New Generation of Large-Scale Assessment Hong Jiao, Robert W. Lissitz, 2017-06-01 The new generation of tests is faced with new challenges In the K 12 setting the new learning targets are intended to assess higher order thinking skills and prepare students to be ready for college and career and to keep American students competitive with their international peers In addition the new generation of state tests requires the use of technology in item delivery and embedding assessment in real world authentic situations It further requires accurate assessment of students at all ability levels One of the most important questions is how to maintain test fairness in the new assessments with technology innovative items and technology delivered tests In the traditional testing programs such as licensure and certification tests and college admission tests test fairness has constantly been a key psychometric issue in test development and this continues to be the case with the national testing programs As test fairness needs to be addressed throughout the whole process of test development experts from state admission and licensure tests will address test fairness challenges in the new generation

assessment The book chapters clarify misconceptions of test fairness including the use of admission test results in cohort comparison the use of international assessment results in trend evaluation whether standardization and fairness necessarily mean uniformity when test takers have different cultural backgrounds and whether standardization can insure fairness More technically chapters also address issues related to how compromised items and test fairness are related to classification decisions how accessibility in item development and accommodation could be mingled with technology how to assess special populations with dyslexia using Blinder Oaxaca Decomposition for differential item functioning detection and differential feature functioning in automated scoring Overall this book addresses test fairness issues in state assessment college admission testing international assessment and licensure tests Fairness is discussed in the context of culture and special populations Further fairness related to performance assessment and automated scoring is a focus as well This book provides a very good source of information related to test fairness issues in test development in the new generation of assessment where technology is highly involved

Brain-immune interactions in health and disease Adam Denes, Jaleel A. Miyan, 2015-06-12 Brain immune interactions are essential to maintain health and their dysfunction contributes to diverse human diseases Recent data show that haematopoietic processes and immune organs are under central autonomic control Deficient regulation of inflammatory events contributes to brain diseases whereas acute or chronic brain injury is linked with the development of systemic inflammatory conditions or immunosuppression At present common disorders with high socio economic burden such as cancer cardiovascular neuroinflammatory and neurodegenerative diseases asthma allergies autism psychiatric conditions and sepsis are believed to be influenced at least in part by the dysfunction of brain immune communication Since the median age of the world s population is increasing rapidly it is expected that the burden of common non communicable diseases will further increase which represents a huge challenge to the health care systems worldwide Thus there is an increasing demand to understand and treat complex diseases many of which are age related and this is not possible unless the fine tuned communication between large systems such as the nervous and the immune system is comprehensively understood Although it is impossible to cover all areas of relevant research in this field papers in this eBook give some insight to a few important aspects of brain immune interactions and their contribution to disease We hope that this collection could stimulate further relevant research and facilitate discussions to support the understanding of the highly complex interactions between the immune system and the brain in health and disease
