Research for Educational Change Jill Adler, Anna Sfard, 2016-06-17 Research for Educational Change presents ways in
 which educational research can fulfil its commitments to educational practice Focussing its discussion within the context of
 mathematics education it argues that while research generated insights can have beneficial effects on learning and teaching
 the question of how these effects are to be generated and sustained is far from evident The question of how to turn research
 into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social
 injustice In the first part of the book four teams of researchers use different methodologies while analysing the same corpus
 of data collected in a South African mathematics classroom In the second part each of these teams makes a specific proposal
 about what can be done and how so that its research generated insights have a tangible beneficial impact on what is
 happening in mathematical classrooms Combining two discourses that of researchers speaking to one another and that of
 researchers communicating their insights to those responsible for educational practice the book deals with the perennial
 question of communication between those who study educational processes and those who are directly responsible for
 teacher education educational research and classroom practices This book will be key reading for postgraduates researchers

and academics in education and particularly in the areas of mathematics education education research teacher education and classroom practice It will also appeal to teacher educators practitioners and undergraduate students interested in educational research
