From Is to Ought: The Place of Normative Models in the Study of Human Thought Shira Elqayam, David E. Over, 2016-08-12 In the study of human thinking two main research questions can be asked Descriptive Q What is human thinking like Normative Q What ought human thinking be like For decades these two questions have dominated the field and the relationship between them generated many a controversy Empirical normativist approaches regard the answers to these questions as positively correlated in essence human thinking is what it ought to be although what counts as the ought standard is moot In contemporary theories of reasoning and decision making this is often associated with a Panglossian framework an adaptationist approach which regards human thinking as a priori rational In contrast prescriptive normativism sees the answers to these two questions as negatively correlated Normative models are still relevant to human thought but human behaviour deviates from them quite markedly with the invited conclusion that humans are often irrational Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking Following Hume's strict divide between the is and the ought descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated with only the former question suitable for psychological study of human behaviour This basic division carries over to the relation between normative ought rationality based on conforming to normative standards and instrumental rationality based on achieving one's goals Descriptivist approaches regard the two as dissociated whereas normativist approaches tend to see them as closely linked with normative arguments defining and justifying instrumental rationality This research topic brings together diverse contributions to the continuing debate Featuring contributions from

 Eugen Rusu, 2020-03-25 The effects of human caused global warming are obvious requiring new strategies and approaches
 The concept of business as usual is now no longer beneficial Extraction of renewable energy in marine environments
 represents a viable solution and an important path for the future These huge renewable energy resources in seas and oceans
 can be harvested including wind tide and waves Despite the initial difficulties related mostly to the elevated operational risks
 in the harsh marine environment newly developed technologies are economically effective or promising Simultaneously many
 challenges remain to be faced These are the main issues targeted by the present book which is associated with the Special
 Issue of Energies Journal entitled Renewable Energy in Marine Environment Papers on innovative technical developments
 reviews case studies and analytics as well as assessments and papers from different disciplines that are relevant to the topic
 are included From this perspective we hope that the results presented are of interest to for scientists and those in related
 fields such as energy and marine environments as well as for a wider audience *Proofs in Competition Math: Volume 1*
 Alexander Toller, Freya Edholm, Dennis Chen, 2019-07-04 All too often through common school mathematics students find
 themselves excelling in school math classes by memorizing formulas but not their applications or the motivation behind them
 As a consequence understanding derived in this manner is tragically based on little or no proof This is why studying proofs is

paramount Proofs help us understand the nature of mathematics and show us the key to appreciating its elegance But even getting past the concern of why should this be true students often face the question of when will I ever need this in life Proofs in Competition Math aims to remedy these issues at a wide range of levels from the fundamentals of competition math all the way to the Olympiad level and beyond Don t worry if you don t know all of the math in this book there will be prerequisites for each skill level giving you a better idea of your current strengths and weaknesses and allowing you to set realistic goals as a math student So mathematical minds we set you off
