Analog Circuits and Systems Optimization based on Evolutionary Computation Techniques Manuel Barros, Jorge Guilherme, Nuno Horta, 2010-04-22 The microelectronics market with special emphasis to the production of complex mixed signal systems on chip SoC is driven by three main dynamics time market productivity and managing complexity Pushed by the progress in nanometer technology the design teams are facing a curve of complexity that grows exponentially thereby slowing down the productivity design rate Analog design automation tools are not developing at the same pace of technology once custom design characterized by decisions taken at each step of the analog design flow lies most of the time on designer knowledge and expertise Actually the use of sign management platforms like the Cadences Virtuoso platform with a set of tegrated CAD

tools and database facilities to deal with the design transformations from the system level to the physical implementation can significantly speed up the design process and enhance the productivity of analog mixed signal integrated circuit IC design teams These design management platforms are a valuable help in analog IC design but they are still far behind the development stage of design automation tools already available for digital design Therefore the development of new CAD tools and design methodologies for analog and mixed signal ICs is essential to increase the designer's productivity and reduce design productivity gap The work presented in this book describes a new design automation approach to the problem of sizing analog ICs
