10. A node is a place where a branch splits. It represents the most common ancestor shared by a clade. (11. DPA: organisms/groups, nodes and relationships/characters, homology, etc.)
12. As more research is done and the evolutionary histories of different species become better understood, evolutionary trees are rearranged to reflect the most current scientific understanding.
 13. The species are very closely related; they share a relatively recent common ancestor.
 14. A phylogenetic tree is a diagram that shows the relationships between groups of species.
 15. Cladistics is classification based on evolutionary relationships and a cladogram shows these relationships in a branching-tree diagram.
 16. Derived
