(Curiosity) (Chapter 6) (Materials Around Us)

(Class – VI)

Question 8:

Imagine you have two mysterious materials, X and Y. When you try to press material X, it feels rigid and does not change its shape easily. On the other hand, material Y easily changes its shape when you press it. Now, when you mix both materials in water, only material X dissolves completely while material Y remains unchanged. What can materials X and Y be? Can you identify whether material X is hard or soft? What about material Y? Justify your answer.

Answer 8:

Material X could be salt (hard and soluble in water).

Material Y could be rubber (soft and insoluble in water).

Material X is hard because it does not change shape easily and dissolves in water.

Material Y is soft because it changes shape easily and does not dissolve in water.
