1. Temperature and Molecular Motion: Decrease the temperature to 100K. Observe the motion of 2-3 gas molecules. Repeat then increase the temperature to 300K. Again observe the motion. Enable tracking, and observe the highlighted molecules.

a. What is the difference in the speed of the molecules at the different temperatures?

- The higher the temp, the faster the molecules move.

b. At a given temperature, does the tracked molecule always move at the same speed?

- The speed of the tracked molecule depends on the speed of the other molecules that interact with it.

2 Reaction: Enable tracking, select oxygen on the top blue menu, and enable tracking. Allow the reaction to run for a few seconds, until the mixture changes. Freeze, open the window, click back to the tracking, and step through until you see the molecules react. Freeze, enable molecules, and record. Observe the colored, bonded molecules.

a. What is the reaction that occurred? Give the balanced equation, some names, stating the reaction is a chemical rxn... $H_2 + O_2 \rightarrow H_2O$ $O_2 + H_2 \rightarrow H_2O$. Note that the equation states the reactants and the products for all things and 2 calculations.

b. Do all collisions between H_2 and O_2 molecules cause a reaction? Why or why not?

- No. When an H_2 molecule collides with O_2 molecule or H_2O will, a reaction takes place. The orientation of the O_2 molecules determines if a reaction takes place.
