Engineering Philip Kosky,William D. Keat,2012-07-25 Suitable for those interested in exploring various fields of engineering and learning how engineers work to solve problems this title explores the world of engineering by introducing the reader to what engineers do the fundamental principles that form the basis of their work and how they apply that knowledge within a structured design process **Exploring Mathematics with CAS Assistance** Lydia S. Novozhilova,Robert D.

Dolan,2022-11-08 Exploring Mathematics with CAS Assistance is designed as a textbook for an innovative mathematics major course in using a computer algebra system CAS to investigate explore and apply mathematical ideas and techniques in problem solving The book is designed modularly with student investigations and projects in number theory geometry algebra single variable calculus and probability The goal is to provoke an inquiry mindset in students and to arm them with the CAS tools to investigate low entry open ended questions in a variety of mathematical arenas Because of the modular design the individual chapters could also be used selectively to design student projects in a number of upper division mathematics courses These projects could in fact lead into undergraduate research projects The existence of powerful computer algebra systems has changed the way mathematicians perform research this book enables instructors to put some of those new methods and approaches into their undergraduate instruction Prerequisites include a basic working knowledge of discrete mathematics and single variable calculus Programming experience and some basic familiarity with elementary probability and statistics are beneficial but not required The book takes a software agnostic approach and emphasizes algorithmic structure of solution methods by systematically providing their step by step verbal descriptions or suitable pseudocode that can be implemented in any CAS Here is a possible addition to the book description about this new information The code templates for the labs from the book are now available on the github an AI powered developer platform for sharing codes A user can find the Jupyter Notebooks with the labs in the repository <https://github.com/LidaUrazhdina>

Solutions* Martin J. Erickson,2009-01-22 Every mathematician beginner amateur and professional alike thrills to find simple elegant solutions to seemingly difficult problems Such happy resolutions are called aha solutions a phrase popularized by mathematics and science writer Martin Gardner Aha

solutions are surprising stunning and scintillating they reveal the beauty of mathematics This book is a collection of problems with aha solutions The problems are at the level of the college mathematics student but there should be something of interest for the high school student the teacher of mathematics the math fan and anyone else who loves mathematical challenges This collection includes one hundred problems in the areas of arithmetic geometry algebra calculus probability number theory and combinatorics The problems start out easy and generally get more difficult as you progress through the book A few solutions require the use of a computer An important feature of the book is the bonus discussion of related mathematics that follows the solution of each problem This material is there to entertain and inform you or point you to new questions If you don't remember a mathematical definition or concept there is a Toolkit in the back of the book that will help

The Geospatial Web Arno Scharl, Klaus Tochtermann, 2009-02-28 The most important attribute of geospatial platforms is their unique potential to aggregate a multitude of public and private geographic data sets providing access to data from government agencies industry and the general public NASA and other organizations have a wealth of planetary science data representing the output from thousands of satellites in earth orbit and from dozens of costly missions to other planets Benefits derived from both the data and visual interfaces to access the data represent a significant return on investment for the public Integrating geospatial data with semantic and collaborative Web technology multiplies the public benefits and represents the main focus of this book The user interfaces of geobrowsers are designed for the layperson giving convenient access to all kinds of geographically referenced information Geobrowsers hide the technical details related to finding accessing and retrieving such information The daunting challenge of the Geospatial Web is to seamlessly integrate and display vastly different information modes Nowadays it is not enough to simply display a map of some region additional dynamic information modes need to be displayed and put into context from weather sensor readings and live aerial video feeds to daily news updates photo collections and video archives

Algorithmic Lie Theory for Solving Ordinary Differential Equations Fritz Schwarz, 2007-10-02 Despite the fact that Sophus Lie's theory was virtually the only systematic method for solving nonlinear ordinary differential equations ODEs it was rarely used for practical problems because of the massive amount of calculations involved But with the advent of computer algebra programs it became possible to apply Lie theory to concrete problems
