Aviation and Its Management Arif Sikander, 2019-05-22 Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge which includes flying, engineering, airports, allied trades for aircraft and airports, airline and airport management and operations education etc, one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft maintenance, runway safety management systems and air traffic management. In particular, attention will be given to aspects such as analysis of air traffic in a domestic market, runway safety management systems, critical success factors for multiple MRO service providers, key pain points of the industry to be addressed to move into the future, new research on hub airports for international flights, new business models for airlines and runway safety management systems. This book is useful to aviation managers, educators, students and professionals interested in any of the above issues.

Comunicación y sistemas de información de las aeronaves JOGLAR ALCUBILLA, JAVIER, 2017-03-01 Esta obra es la documentación perfecta para formación sobre comunicaciones ATA23, cabina de pasaje ATA44 y sistemas de información a bordo ATA46, necesaria para acceder a algunos de los módulos exigidos por la EASA Parte 66 para la obtención de las licencias B1 y B2, además de a módulos específicos de los Ciclos Formativos de grado superior de Mantenimiento de Sistemas Electrónicos y Aviónicos en Aeronaves y de Mantenimiento Aeromecánico de Aviones o Helicópteros con Motor de Turbina o Motor de Pistón de la familia profesional de Transporte y Mantenimiento de Vehículos. En particular, la obra cubre los conocimientos indicados de acceso EASA Parte 66 a los módulos 11A, 11B, 12 y 13 sobre aerodinámica, estructuras y sistemas de aeronaves tanto para licencias B1 como para licencias B2. Coincide con el programa del módulo de Aerodinámica, Estructuras y Sistemas de Comunicación, Cabina de Pasaje e Información de Aeronaves del Ciclo Formativo de grado superior de Mantenimiento de Sistemas Electrónicos y Aviónicos y desarrolla también el programa mencionado de los módulos de Aviónica para los cuatro ciclos superiores en mantenimiento aeromecánico. El libro está dividido en tres bloques independientes. En el primero se tratan los sistemas de comunicación genéricos; en el segundo se abordan los sistemas de comunicación específicos de la aeronave tanto externos como internos; en el tercero se describe el desarrollo de los sistemas de información a bordo. Al comienzo de la obra, Capítulo 1, se tratan los distintos tipos de modulación analógicas como los receptores y transmisores elementales. Se hace aplicación de los sistemas de comunicación múltiple además de una descripción de los elementos radiantes, antenas y su uso en aeronáutica y se concluye con una serie de problemas y sus soluciones para cada

apartado También se ve como en aeronaves los sistemas de comunicación se clasifican en externos para radiotransmisión Capítulo 2 e internos para interfono y entretenimiento del pasaje Capítulo 3 El último capítulo trata de los sistemas de información a bordo Capítulo 4 El libro concluye con una serie de anexos de interés que aportan información relacionada con las comunicaciones y la información a bordo
