Welcome to one of the most advanced versions of the Aeronautical Library. In this new work of the AIRBUS A320 series, we will know the normal operation of the aircraft during a real commercial flight from the city of Malaga, Spain (LEMG) to the city of Valencia, Spain (LEVC). The objective of this manual is that each reader knows everything that happens during a normal flight from the time the pilots arrive at the airport, prepare the cabin, develop the flight, and until they reach their destination. AIRBUS A320 Normal Operation is the ideal complement to the rest of the A320 collection in all its volumes. Each step is explained with the most precise detail and graphics of the panels that the pilot will operate in each instance of the flight, added to the cartography that should be used for a flight of these circumstances. And as an added value, all communication structures between the pilot and the controller. A practical and entertaining guide. How only the Aeronautical Library can offer a subject as complex as the operations of A320, it becomes a simple and enjoyable topic to read in this entertaining and didactic manual.

Aviation and Its Management Arif Sikander, 2019-05-22. Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy, mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge, which includes flying, engineering, airports, allied trades for aircraft, and airports, airline and airport management, and operations education, etc., one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft maintenance, runway safety management systems, and air traffic management. In particular, attention will be given to aspects such as analysis of air traffic in a domestic market, runway safety management systems, critical success factors for multiple MRO service providers, key pain points of the industry to be addressed to move into the future, new research on hub airports for international flights, new business models for airlines, and runway safety management systems. This book is useful to aviation managers, educators, students, and professionals interested in any of the above issues.

Airbus A320 Encyclopedia Facundo Conforti, 2022-03-07. In a constantly growing aeronautical industry, the demand for professional pilots is increasing. Year after year, thousands of applicants come to the airlines looking for a job, but only a small fraction of them get the job, and of that small fraction, only a very select group are the pilots who manage to develop their professional careers in a company. The other pilots don't get to achieve their goals for different reasons; one of them is the lack of knowledge that leads them to face challenges that they cannot overcome. In this guide, we will try to provide each reader with the necessary tools to learn all the most relevant aspects of one of the most flying commercial aircraft in the world. A complete guide that covers the knowledge of all the aircraft's systems, the Airbus

flight philosophy and a complete analysis of the operation of the FMS flight system where the reader will learn to operate the flight computer effectively and in various situations that may occur in real life Finally you will learn all about a normal operation in a complete day as a pilot in command of A320 After learning the contents of this A320 encyclopedia the pilot will arrive at the new job with a solid knowledge of the aircraft he will fly and this will make his learning process within the airline reach the highest academic and professional level
