Gouwens,Paul F. Rice,2012-12-06 I I This book is intended to guide practicing structural engineers into more profitable routine designs with the AISC Load and Resistance Factor Design Specification LRFD for structural steel buildings LRFD is a method of proportioning steel structures so that no applicable limit state is exceeded when the structure is subjected to all appropriate factored load combinations Strength limit states are related to safety and concern maximum load carrying capacity Serviceability limit states are related to performance under service load conditions such as deflections The term resistance includes both strength states and serviceability limit states LRFD is a new approach to the design of structural steel for buildings It involves explicit consideration of limit states multiple load factors and resistance factors and implicit probabilistic determination of reliability The type of factoring used by LRFD differs from the allowable stress design of Chapters A through M of the 1989 Ninth Edition of the AISC Specifications for Allowable Stress Design where only the resistance is divided by a factor of safety to obtain an allowable stress and from the plastic design provisions of Chapter N where the loads are multiplied by a common load factor of 1.7 for gravity loads and 1.3 for gravity loads acting with wind or seismic loads LRFD offers the structural engineer greater flexibility rationality and economy than the previous 1989 Ninth Edition of the AISC Specifications for Allowable Stress Design Steel Structures: Roof Members Design and Detailing Saad Hasan Tantawi,2018-08-03 The Objective of this book is to guide structural engineering students and engineering professionals into the process of roof members design and calculations for steel framed buildings This book covers gravity and lateral loads calculations in accordance with ASCE7 10 how to calculate snow drift loads moment frames and braced frames lateral load analysis using the slope deflection methods and unit load methods Moment connections calculations according to AISC Design Guides and roof members design subjected to both axial and flexural bending This book also covers over 230 different sections details done in CAD and REVIT for roof framing Details such as roof beams and joists attachment into a brick and metal studs walls CMU walls concrete and wood walls connections detailing whether it is a moment or shear connection existing roof joists web and chord reinforcement and roof trusses section details *Modern Steel Construction* ,2009
