[Neurologic Channelopathies](#), 2024-08-20 In the last 15 years a combination of detailed clinical genetic molecular electrophysiological and immunological research has combined to result in a deep understanding of a subgroup of neurological diseases spanning the central and peripheral nervous system and which have become known collectively as the Neurological Channelopathies Ion channels are critical membrane bound proteins that underpin many fundamental processes in the central and peripheral nervous system including action potential generation and propagation and the control of neurotransmitter release at all CNS synapses as well as at the neuromuscular junction Ion channels are consequently essential for all motor actions cognitive functions and sensory perceptions Although it was originally considered that significant ion channel dysfunction would not be

compatible with life we now know this is often not the case although severe disease can often be the result Given the fundamental processes that are dependent on ion channel function it is perhaps unsurprising that genetic or immunologically mediated ion channel dysfunction can result in almost any neurological symptom patients may present to virtually any subspecialty within both adult and child neurology The advances that have been made here have not only increased knowledge about the fundamental molecular mechanisms at play but have also improved our ability to both diagnose and treat many of these disorders in clinical practice Given these major advances it is now the right time to combine this knowledge into a single HCN volume dedicated to the Neurological Channelopathies The book will begin with an introductory overview highlighting common mechanistic themes that cut across different CNS and PNS presentations but with potential for common treatment approaches This initial chapter considers the classification genetics and fundamental physiology of ion channels Subsequent chapters present a detailed consideration of all genetic and immunological channelopathies Each chapter will consider Pathophysiological underpinnings genetic or immunological Clinical presentations Diagnostic approach Treatment and management Identifies importance of ion channels to CNS PNS function Considers the classification genetics and physiology of ion channels Presents all major immunological and genetic channelopathies Provides clinical presentation diagnosis and treatment of channelopathies **Insights into Clinical**

López-Caneda, Fernando Cadaveira, Salvatore Campanella, 2019-03-20 Binge drinking BD is a highly prevalent pattern in most Western countries characterized by the intake of large amounts of alcohol in a short time followed by periods of abstinence This abusive form of alcohol consumption is a regular practice in around a third of European and American youths The high prevalence of BD at this age is of particular concern since adolescence and youth are in a period of special vulnerability to neurotoxic effects of alcohol mainly due to the structural and functional changes going on in the brain throughout this key developmental stage Evidence gathered during the last decade from animal and human studies seems to point to multiple brain anomalies associated with BD In this Research Topic we have collated a compendium of articles that address multiple aspects of BD during adolescence and young adulthood such as identification prevalence gender differences and neurocognitive anomalies associated with this excessive alcohol consumption pattern These articles collectively highlight the breadth of current research conducted in this field but also the need to join efforts to improve the screening of the BD pattern the characterization of its consequences as well as the translation of knowledge acquired in the laboratory into clinical practice We remain confident that this Research Topic will contribute significantly to the understanding of BD and its consequences and will further stimulate high quality investigation in this relatively new research field
