Due: **3rd May – 23:59** [can submit until 5th May with late penalty of 5% per day, thereafter 100% per day without special consideration or OUP/ELU]

1. AIM and Purpose :

In this task, students start to analyze their profile structure chosen in Task 1, using the concepts learnt in the lectures. Further details are set out below:

2. Quick Info :

- Identify your profile structure into one of the following:
 - Group 1 – Beams like structures (e.g., bridges)
 - Group 2 – Frame like structures (e.g., swings, sheds, verandah, bus stops)
 - Group 3 – Stand up structures (e.g., billboards)
 - Group 4 – Not defined by the above
- Identify the main supports for the structure; check with tutors if in doubt.
- Use the principles of articulated structures to disassemble into sub-structures.
- Choose the beam element for further analysis. **Remember the beam element must be either simply supported or cantilever beam!!!**
- Use **partially distributed load on the beam member for 0.6L of the span** (L is clear distance between beam supports) based on your student number as follows:
 - If your student number ends with an odd number, multiply the last digit by 3.36 and if ends with an even number, multiply the last digit by 4.24 and if it ends with 0, use 9.45 as your odd in kN/m – **this will be your partial odd;**
 - If your student number ends with an odd number, load starts from the left hand side of the beam and if ends with an even number or ends with 0, the loading starts from the right hand side as shown in the example sketch below. Use this to vary for other combinations.
- **Cantilever beam, ending with an odd student number:**
- **Simply supported beam, ending with an even number or 0:**
- **The above are example sketches. If in doubt, check with SrI/ tutor. Failure to follow the loading condition will result in NO marks despite calculations.**
