

Experimental Probability vs. Theoretical Probability

Experimental Probability is found by repeating an experiment and observing the outcomes.

$$P(\text{event}) = \frac{\text{number of times event occurs}}{\text{total number of trials}}$$

Example:

A coin is tossed 10 times:
A head is recorded 7 times
and a tail 3 times.

$$P(\text{head}) = \frac{7}{10}$$

$$P(\text{tail}) = \frac{3}{10}$$

Theoretical Probability is what is expected to happen based on mathematics

$$P(\text{event}) = \frac{\text{number of favorable outcomes}}{\text{total number of possible outcomes}}$$

Example:

A coin is tossed.

$$P(\text{head}) = \frac{1}{2}$$

$$P(\text{tail}) = \frac{1}{2}$$

McDougal Littell Passport to Algebra and Geometry Ron Larson,1999 Reliability Theory and Practice Igor Bazovsky,2004-01-01 This text applies statistical mathematics to the analysis of electrical mechanical and other systems used in airborne missile and ground equipment It applies quantitative reliability analysis to the design of series parallel and standby systems of all orders of complexity discusses the role of Bayes theorem in analyses of complex systems and examines maintenance repair overhaul and parts replacement policies for complex systems *Probability and Theory of Errors* Robert Simpson Woodward,1896 **Bridges to Algebra and Geometry** ,2004 **Scott Foresman-Addison Wesley Middle School Math** ,2002 **Oxford University Gazette** University of Oxford,1954 **Engineering Design Reliability Handbook** Efstratios Nikolaidis,Dan M. Ghiocel,Suren Singhal,2004-12-22 Researchers in the engineering industry and academia are making important advances on reliability based design and modeling of uncertainty when data is limited Non deterministic approaches have enabled industries to save billions by reducing design and warranty costs and by improving quality Considering the lack of comprehensive and definitive presentations on the subject Engineering Design Reliability Handbook is a valuable addition to the reliability literature It presents the perspectives of experts from the industry national labs and academia on non deterministic approaches including probabilistic interval and fuzzy sets based methods generalized information theory Dempster Shaffer evidence theory and robust reliability It also presents recent advances in all important fields of reliability design including modeling of uncertainty reliability assessment of both static and dynamic components and systems design decision making in the face of uncertainty and reliability validation The editors and the authors also discuss documented success stories and quantify the benefits of these approaches With contributions from a team of respected international authors and the guidance of esteemed editors this handbook is a distinctive addition to the acclaimed line of handbooks from CRC Press *CORD Bridges to Algebra and Geometry* Cord,2000 **Applied Mechanics Reviews** ,1974 *Constraint Programming and Decision Making* Martine Ceberio,Vladik Kreinovich,2014-01-21 In many application areas it is necessary to make effective decisions under constraints Several area specific techniques are known for such decision problems however because these techniques are area specific it is not easy to apply each technique to other applications areas Cross fertilization between different application areas is one of the main objectives of the annual International Workshops on Constraint Programming and Decision Making Those workshops held in the US El Paso Texas in Europe Lyon France and in Asia Novosibirsk Russia from 2008 to 2012 have attracted researchers and practitioners from all over the world This volume presents extended versions of selected papers from those workshops These papers deal with all stages of decision making under constraints 1 formulating the problem of multi criteria decision making in precise terms 2 determining when the corresponding decision problem is algorithmically solvable 3 finding the corresponding algorithms and making these algorithms as efficient as possible and 4 taking into account interval probabilistic and fuzzy uncertainty

inherent in the corresponding decision making problems The resulting application areas include environmental studies selecting the best location for a meteorological tower biology selecting the most probable evolution history of a species and engineering designing the best control for a magnetic levitation train
