Shape Interrogation for Computer Aided Design and Manufacturing Nicholas M. Patrikalakis, Takashi Maekawa, 2009-11-27 Shape interrogation is the process of extraction of information from a geometric model. It is a fundamental component of Computer Aided Design and Manufacturing CAD/CAM systems. The authors focus on shape interrogation of geometric models bounded by free form surfaces. Free form surfaces, also called sculptured surfaces, are widely used in the bodies of ships, automobiles, and aircraft, which have both functionality and attractive shape requirements. Many electronic devices as well as consumer products are designed with aesthetic shapes which involve free form surfaces. This book provides the mathematical fundamentals as well as algorithms for various shape interrogation methods, including nonlinear polynomial solvers, intersection problems, differential geometry of intersection curves, distance functions, curve and surface interrogation, umbilics, and lines of curvature, geodesics, and offset curves and surfaces. This book will be of interest both to graduate students and professionals. *Calculus: Single Variable, Student Study and Solutions Companion* Brian E. Blank, Steven G. Krantz, 2011-08-30 In order to show scientists and engineers how to apply calculus, this edition places a greater emphasis on conceptual understanding.
