  7. derived character
  8. a group of organisms that share a common ancestor
  9. Molecular clock (molecular clock derived characters are shared by which groups of organisms; the more derived characters a group of organisms has, the later it descended from the common ancestor)
10. A node is a place where a branch splits. It represents the most common ancestor shared by a clade. (11. DNA sequences/genomes, fossil and morphological characters, behavioral traits)
12. As more research is done and the evolutionary histories of different species become better understood, evolutionary trees are rearranged to reflect the most current scientific understanding.
  13. The species are very closely related; they share a relatively recent common ancestor.
  14. A phylogenetic tree is a diagram that shows the relationships between groups of species.
  15. Cladistics is classification based on evolutionary relationships and a cladogram shows these relationships in a branching-tree diagram.
  16. Derived
  17. The morphology or the other distinct characteristics (traits) of organisms (organisms at the individual or genetic level)
  18. Classified species are more similar to each other through evolutionary relationships.
