Upgrading Physics Education to Meet the Needs of Society Maurício Pietrocola, 2019-02-19 Nations around the globe consider physics education an important tool of economic and social development and currently advocate the use of innovative strategies to prepare students for knowledge and skills acquisition. Particularly in the last decade a series of revisions were made to physics curricula in an attempt to cope with the changing needs and expectations of society. Educational transformation is a major challenge due to educational systems' resistance to change. Updated curriculum content, pedagogical facilities, for example computers in a school, new teaching and learning strategies, and the prejudice against girls in physics classes are all issues that have to be addressed. Educational research provides a way to build schemas and resources to promote changes in physics education. This volume presents physics teaching and learning research connected with the main educational scenarios.

Conceptual Developments of 20th Century Field Theories Tian Yu Cao, 1998-05-14 This book gives a broad synthesis of conceptual developments of twentieth century field theories from the general theory of relativity to quantum field theory and gauge theory. The author gives a historical-critical exposition of the conceptual foundations of the theories, revealing a pattern to the evolution of these conceptions. Theoretical physicists and students of theoretical physics will find in this book an account of the foundational problems of their discipline that will help them understand the internal logic and dynamics of their subject. In addition, the book will provide professional historians and philosophers of science and especially philosophers of physics with a conceptual basis for further historical, cultural, and sociological analysis of the theories discussed. The book also contains much material for philosophical, metaphysical, methodological, and semantical reflection. Finally, the scientifically qualified general reader will find in this book a deeper analysis of contemporary conceptions of the physical world than can be found in popular accounts of the subject.

The handbook is organised into four complementary parts: How can we think about young children's thinking? Concepts and contexts. Knowing about the brain and knowing about the mind. Making sense of the world. Documenting and developing children's thinking. Supported throughout with relevant research.
