Experiment 8.1 – Counter with Register and Register with Counter (100% weight, 100% completion)

1. Description: This circuit is intended as a classroom exercise in which, beyond logic and computer-aided logic, test and troubleshooting/analysis skills might be applied to the lab circuit. Such a task is fairly simple, and it is not intended to be a test of your ability to design a circuit.

2. Objectives: The purpose of Experiment 8.1 is to demonstrate, with the laboratory equipment, which circuit functions are possible, and to practice, and to be able to design, a circuit of the circuit that is given. The circuit is a 4-bit counter, and a 4-bit register.

3. Description:

We will implement the circuit in the lab using the circuit board. The circuit board is a 4-bit counter with 4-bit register and 4-bit register.

4. Description: The circuit is a 4-bit counter with 4-bit register and 4-bit register. The circuit is a 4-bit counter with 4-bit register and 4-bit register.

The Dynamics of Digital Excitation Masakazu Shoji, 2012-12-06 The electronic circuit is a proud child of twentieth century natural science In a hundred short years it has developed to the point that it now enhances nearly every aspect of human life Yet our basic understanding of electronic circuit operation electronic circuit theory has not made significant progress during the semiconductor industry's explosive growth from 1950s to the present This is because the electronic circuit has never been considered to be a challenging research subject by physicists Linear passive circuit theory was established by the late 1940s After the advent of the semiconductor electron devices the interest of the technical community shifted away from circuit theory Twenty years later when integrated circuit technology began an explosive growth circuit theory was again left behind in the shadow of rapidly progressing computer aided design CAD technology The present majority view is that electronic circuit theory stands in a subordinate position to CAD and to device processing technology In 1950s and 1960s several new semiconductor devices were invented every year and each new device seemed to have some interesting fundamental physical mechanisms that appeared worth investigating Compared to attractive device physics the problems of the semiconductor device circuit appeared less sophisticated and less attractive Bright minds of the time drifted away from circuit theory to electron device physics After thirty years only one type of semiconductor device the electron triode with several variations survived whereas hundreds of them went into oblivion
