Geometry Labs Henri Picciotto,1999 Geometry Labs is a book of hands on activities that use manipulatives to teach important ideas in geometry These 78 activities have enough depth to provide excellent opportunities for discussion and reflection in both middle school and high school classrooms Introduction to Stokes Structures Claude Sabbah,2012-10-03 This research monograph provides a geometric description of holonomic differential systems in one or more variables Stokes matrices form the extended monodromy data for a linear differential equation of one complex variable near an irregular singular point The present volume presents the approach in terms of Stokes filtrations For linear differential equations on a Riemann surface it also develops the related notion of a Stokes perverse sheaf This point of view is generalized to holonomic systems of linear differential equations in the complex domain and a general Riemann Hilbert correspondence is proved for vector bundles with meromorphic connections on a complex manifold Applications to the distributions solutions to such systems are also

discussed and various operations on Stokes filtered local systems are analyzed Homological Algebra S.I. Gelfand, Yu.I.
