Factoring Review Sheet

- Factor out GCF (Greatest Common Factor), if any. Make sure to check for the largest number and/or variable that is common to all terms.
- How many terms are there?
 - For two terms, factor using:
 - Difference of squares: $a^2 - b^2 = (a + b)(a - b)$
 - Difference of cubes: $a^3 - b^3 = (a - b)(a^2 + ab + b^2)$
 - Sum of cubes: $a^3 + b^3 = (a + b)(a^2 - ab + b^2)$
 - For three terms, factor using:
 - Perfect square trinomials: $a^2 + 2ab + b^2 = (a + b)^2$ OR $a^2 - 2ab + b^2 = (a - b)^2$
 - Trinomials in form $x^2 + bx + c = (x + r)(x + s)$: To factor, find 2 numbers that multiply to get c and add to get b .
 - Trinomials in form $ax^2 + bx + c = (r^2x + s^2)(r^2x + t^2)$: Find 2 numbers that multiply to get $a \cdot c$ and add to get b , then factor using grouping or trial & error.
 - For four terms, factor using grouping (Factor out GCF three times).
- Repeat steps as necessary to factor completely.

Model Emergent Dynamics in Complex Systems A. J. Roberts, 2014-12-18 Arising out of the growing interest in and applications of modern dynamical systems theory this book explores how to derive relatively simple dynamical equations that model complex physical interactions The author's objectives are to use sound theory to explore algebraic techniques develop interesting applications and discover general modeling principles Model Emergent Dynamics in Complex Systems unifies into one powerful and coherent approach the many varied extant methods for mathematical model reduction and approximation Using mathematical models at various levels of resolution and complexity the book establishes the relationships between such multiscale models and clarifying difficulties and apparent paradoxes and addresses model reduction for systems resolves initial conditions and illuminates control and uncertainty The basis for the author's methodology is the theory and the geometric picture of both coordinate transforms and invariant manifolds in dynamical systems in particular center and slow manifolds are heavily used The wonderful aspect of this approach is the range of geometric interpretations of the modeling process that it produces simple geometric pictures inspire sound methods of analysis and construction Further pictures drawn of state spaces also provide a route to better assess a model's limitations and strengths Geometry and algebra form a powerful partnership and coordinate transforms and manifolds provide a powerfully enhanced and unified view of a swathe of other complex system modeling methodologies such as averaging homogenization multiple scales singular perturbations two timing and WKB theory Audience Advanced undergraduate and graduate students engineers scientists and other researchers who need to understand systems and modeling at different levels of resolution and complexity will all find this book useful

Cohomology of Infinite-Dimensional Lie Algebras D.B. Fuks, 2012-12-06 There is no question that the cohomology of infinite dimensional Lie algebras deserves a brief and separate mono graph This subject is not cover d by any of the tradition al branches of mathematics and is characterized by relative ly elementary proofs and varied application Moreover the subject matter is widely scattered in various research papers or exists only in verbal form The theory of infinite dimensional Lie algebras differs markedly from the theory of finite dimensional Lie algebras in that the latter possesses powerful classification theo rems which usually allow one to recognize any finite dimensional Lie algebra over the field of complex or real numbers i e find it in some list There are classifica tion theorems in the theory of infinite dimensional Lie al gebras as well but they are encumbered by strong restric tions of a technical character These theorems are useful mainly because they yield a considerable supply of interest ing examples We begin with a list of such examples and further direct our main efforts to their study
