Problems in Algebra for Teachers Alexander Karp, Julia Viro, 2018-10-01 The book is a collection of problems in school mathematics specifically written for the teachers. It is an attempt to enrich prospective and current teachers with the deep knowledge of school mathematics and to develop their reasoning and proving skills. Also, it is supposed to help them to anticipate and analyze their students' errors and use them as teachable moments. The book is intended to be used in mathematics education courses or professional development for pre-service or in-service secondary school teachers. It can be used in graduate and undergraduate courses in accordance with the orientations of different teacher preparation programs. Additionally, it can be used for the independent studies. One can also imagine situations in which teachers might use certain problems from this problem book directly in working with students, but this would constitute a supplementary use of the book.

survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems results and techniques.

Geometries of Learning Pavan Turaga, Yunye Gong, P. Thomas Fletcher, Ajay Divakaran, 2025-04-25 Deep neural networks have demonstrated great success in many computer vision applications where intelligent recognition and analysis are performed based on high dimensional visual data. However in contrast to the rapid development of advanced architectures and training schemes developments have been limited in the theory of analyzing deep neural networks and deep learning training through the lens of geometries. The lack of such analysis prevents further understanding and affects the acceptance of deep neural networks for practical applications. For example deep neural networks are often challenged by their vulnerability to adversarial attacks their lack of systematic guarantees on effectiveness and stability and their degraded generalization capability outside the distribution of training data.

Numerical Mathematics and Advanced Applications F. Brezzi,A. Buffa,S. Corsaro,A. Murli,2012-12-06 Scientific computing is a fast growing and fast changing area whose applications to various branches of science engineering medicine economics and others are increasing in number and relevance every day There are two main reasons among others that make scientific computing change so rapidly One is the increasing number of different research areas beginning to make use of numerical simulation from nanotechnology to genomics from computer aided diagnosis and operations in medical applications which involve often complete simulations of parts of the human body to economics and finance Each new application and each new aspect of earlier applications draws heavily on the know how that has been acquired on other problems with similar mathematical features It has to be pointed out that the lofty perspective of mathematics succeeds quite often in finding connections among very different phenomena that turn out in the end to share the same mathematical and numerical structure In turn new applications contribute to the cross fertilization by sending back new interpretations and suggestions which are often useful in more classical applications All this creates a resonance effect that contributes greatly to the growth rate of the whole field
