

6. The subroutine CHAR_TO_CODE(character) returns the integer ASCII value of a character. For example:

CHAR_TO_CODE('a') returns the value 97

CHAR_TO_CODE('z') returns the value 122

CHAR_TO_CODE(' ') returns the value 96

CHAR_TO_CODE('(') returns the value 123

Develop an algorithm, using either pseudo-code or a flowchart, that:

- asks the user to enter a character
- outputs 'LOWER' if the user has entered a lowercase character
- outputs 'NOT LOWER' if the user has entered any other character.

You must use the built-in CHAR_TO_CODE subroutine in your answer

```

character ← USERINPUT
character_code ← CHAR_TO_CODE(character)
IF character_code ≥ 97 AND character_code ≤ 122
    OUTPUT 'LOWER'
ELSE
    OUTPUT 'NOT LOWER'
ENDIF

Mastering Algorithms with C Kyle Loudon, 1999-08-05 There are many books on data structures and algorithms including some with useful libraries of C functions Mastering Algorithms with C offers you a unique combination of theoretical background and working code With robust solutions for everyday programming tasks this book avoids the abstract style of most classic data structures and algorithms texts but still provides all of the information you need to understand the purpose and use of common programming techniques Implementations as well as interesting real world examples of each data structure and algorithm are included Using both a programming style and a writing style that are exceptionally clean Kyle Loudon shows you how to use such essential data structures as lists stacks queues sets trees heaps priority queues and graphs He explains how to use algorithms for sorting searching numerical analysis data compression data encryption common graph problems and computational geometry And he describes the relative efficiency of all implementations The compression and encryption chapters not only give you working code for reasonably efficient solutions they offer explanations of concepts in an approachable manner for people who never have had the time or expertise to study them in depth Anyone with a basic understanding of the C language can use this book In order to provide maintainable and extendible code an extra level of abstraction such as pointers to functions is used in examples where appropriate Understanding that these techniques may be unfamiliar to some programmers Loudon explains them clearly in the introductory chapters Contents include Pointers Recursion Analysis of algorithms Data structures lists stacks queues sets hash tables trees heaps priority queues graphs
