## KEY

1. Fill in arrows on the cladogram below with **characteristics** that show how plants evolved over time:

2. Fill in the following table:

| Plant Category                          | Examples of plants                                                             | Defining characteristics                                                                                                                                | Dominant Phase? |
|-----------------------------------------|--------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Seed producing (cones)<br>Gymnosperms   | Conifers<br>Cycads<br>Ginkgos                                                  | Has seeds, has vascular system, DOES NOT need water to reproduce, seeds partially protected by cones, cone is reproductive structure                    | Sporophyte      |
| Seed producing (flowers)<br>Angiosperms | Lilies, apple trees, orange trees, daisies, etc. (anything with flowers/fruit) | Has seeds, vascular system, does not need H <sub>2</sub> O to reproduce, seeds protect and nourish embryo (endosperm), flower is reproductive structure | Sporophyte      |

3. Place the steps of the conifer life cycle in order, from the step started for you:

- Male and female cones grow into mature sporophytes.
- Seeds land and the seedling grows into sporophyte (cycle repeats)
- After seeds harden, cone opens and seeds are released.
- Pollen grains are released from male cones and stick to female ovule.
- One sperm nuclei fertilizes the egg and a diploid embryo develops.
- Pollen tube grows from male spore (pollen) and 2 sperm nuclei travel down to egg

4. What are the two ways pollination occurs in flowering plants?

- Wind
- Animals

5. What is a fruit? **Mature flower ovary**

- What is the role of fruit? (list 2 things) **Seed dispersal and protection.**

6. Botanists classify flowering plants into two groups based on their # of **cotyledons**

7. For the following pictures and descriptions write "M" for monocot or "D" for dicot:

8. Match the following plant life spans with their correct definition:

- |                                                                                                 |               |

**The Dawn Angiosperms** Xin Wang, 2010-08-12 Angiosperms are the most diversified plant group in the world being represented by ca 300 000 species in about 400 families Like all of Life including ourselves they have had their own history and gone through many evolutionary stages before they arrived at their current forms The origin of Angiospermae flowering plants has been the subject of much dispute because this is a key event in the history of life and has a far reaching influence on our understanding of relationships among seed plants as a whole as well as within the angiosperms Until recently most of palaeobotanists recognized angiosperms only from the Cretaceous and younger strata This contradicts the results of molecular analyses I have been working on Mesozoic fossil plants for the past two decades during which time I have studied a number of fossil plants Some of these fossil plants have been published as Jurassic angiosperms and unsurprisingly many questions and doubts have been raised about them These questions need to be addressed seriously and journal papers do not provide sufficient space to compare and relate these early angiosperms In this book these pioneer angiosperms are documented in detail sometimes with new specimens not studied before Also I propose a definition of angiosperms that could be adopted in palaeobotany My aim is to improve clarity and objectivity of judgment about what constitutes a fossil angiosperm CUET PG B.Ed Science - Question Bank (2400 MCQs Chapterwise) Mocktime Publication, 2400 MCQs CUET PG Question Bank B
