High Performance Tensegrity-Inspired Metamaterials and Structures Anna Al Sabouni-Zawadzka, 2022-11-09 Following current trends toward development of novel materials and structures this volume explores the concept of high performance metamaterials and metastructures with extremal mechanical properties inspired by tensegrity systems The idea of extremal materials is applied here to cellular tensegrity lattices of various scales Tensegrity systems have numerous advantages they are lightweight have a high stiffness to mass ratio are prone to structural control can be applied in smart and adaptive systems and exhibit unusual mechanical properties This study is focused on tensegrity lattices whose inner architecture resembles that of cellular metamaterials but which are aimed at civil engineering applications in non material scales It proposes a methodology for investigation of extremal mechanical properties of such systems based on discrete and continuum approaches including the discussion on scale effects It proves that similarly to tensegrity based metamaterials tensegrity metastructures are able to exhibit extremal mechanical behaviour This book is directed to researchers and scientists working on metamaterials and tensegrity systems developing energy

absorption solutions for building and transport industry The findings described in this monograph can also be useful in other fields of applied sciences such as civil engineering robotics and material science

Lower-Dimensional Systems and Molecular Electronics Robert M. Metzger, Peter R. Day, George C. Papavassiliou, 2013-11-11 This volume represents the written account of the NATO Advanced Study Institute Lower

Dimensional Systems and Molecular Electronics held at Hotel Spetses Spetses Island Greece from 12 June to 23 June 1989 The goal of the Institute was to demonstrate the breadth of chemical and physical knowledge that has been acquired in the last 20 years in inorganic and organic crystals polymers and thin films which exhibit phenomena of reduced dimensionality The interest in these systems started in the late 1960 s with lower dimensional inorganic conductors in the early 1970 s with quasi one dimensional crystalline organic conductors which by 1979 led to the first organic superconductors and in 1977 to the FITSt conducting polymers The study of monolayer films Langmuir Blodgett films had progressed since the 1930 s but reached a great upsurge in the early 1980 s The pursuit of non linear optical phenomena became increasingly popular in the early 1980 s as the attention turned from inorganic crystals to organic films and polymers And in the last few years the term moleculw electronics has gained ever increasing acceptance although it is used in several contexts We now have organic superconductors with critical temperatures in excess of 10 K conducting polymers that are soluble and processable and used commercially we have films of a few monolayers that have high in plane electrical conductivity and polymers that show great promise in photonics we even have a few devices that function almost at the molecular level
