**Animals** Ulrike Griebel, D. Kimbrough Oller, Irene M. Pepperberg, 2024-06-13 Human language is unique among animals We assume that complex cognitive capacities in general and language in particular evolved gradually and thus are manifest in different kinds and or degrees in other animals demonstrating social communication This assumption is supported by the fact that we can train social species from very different groups of animals e g great apes dolphins dogs parrots to understand and in several cases even use abstract symbols for communication with humans and conspecifics Even simple grammatical rules for sequences of 2 3 symbols can be trained to be understood by several species e g great apes dogs dolphins Even though human language training in these species takes considerable time and effort it convinces us that cognitive foundations for language are present in other species and given the relevant selection pressures symbolic communication could evolve in other species Chimpanzees, War, and History R. Brian Ferguson, 2023 The question of whether men are predisposed to war runs hot in contemporary scholarship and online discussion Within this debate chimpanzee behavior is often cited to explain humans propensity for violence the claim is that male chimpanzees kill outsiders because they are evolutionarily inclined suggesting to some that people are too The longstanding critique that killing is instead due to human disturbance

has been pronounced dead and buried In Chimpanzees War and History R Brian Ferguson challenges this consensus Bringing readers on a journey through theoretical struggle and clashing ideas about chimpanzees bonobos and evolution Ferguson opens new ground on the age old question are men born to kill *Linguistics and Language Behavior Abstracts*, 2008 Neuroeconomics Paul E. Phillips,Jeansok J. Kim, Daeyeol Lee, The brain is the organ of decision making and evolved to maximize the outcomes desirable for the survival and reproduction of the species Compared to the sensory and motor functions of the brain however the process of decision making is less accessible to direct experimental manipulations and hence requires more careful theoretical analyses Indeed the principle of optimality and frequent departures of human behaviors from those predicted for optimal rational decision makers have long been studied experimentally as well as theoretically However it is only recently that neurobiological studies of decision making started exploiting the framework previously developed in economics and psychology systematically This cross disciplinary research program known as neuroeconomics has already been enormously successful Increasingly neuroscientists benefit from the studies of utility theory game theory prospect theory and reinforcement learning theory and contribute to the refinement of such theories by providing more relevant empirical data This Research Topic will showcase the recent advances in neuroeconomics that combine economic and behavioral analyses in neurobiological studies of value based decision making Sugar and Spice, and Everything Nice: Exploring Prosocial Development Through Infancy and Early Childhood Chris Moore, Markus Paulus, Amanda Williams, 2015-05-18 Prosocial behaviors such as sharing helping and comforting begin to emerge early in development The presence of these prosocial behaviors is important not only in childhood but throughout one s lifetime as behaving prosocially is important for social functioning and maintaining social relationships For many years researchers have been interested in how and when these behaviors develop as well as how these behaviors are influenced by a variety of factors Recently however exciting new research has shown novel and surprising findings particularly on the early development and ontogenetic origins of prosocial behavior Research in this area is important as by understanding what influences prosocial behavior we may be better able to sustain and support the development of prosociality Further a richer understanding may help us to be better able to mediate factors that impede or negatively influence positive social behaviors as well as negate triggers that may lead to negative social behaviors Many theoretical views guide different streams of developmental research in this field Here we will bring together scholars from various theoretical backgrounds to collectively explore the development of early prosocial behaviors from early infancy to early school aged children Contributors will offer insights using a variety of methodologies from various resource allocation paradigms derived from economist game theorists to looking time paradigms and more Together we seek to broadly explore questions pertaining to prosocial development for example at what age do prosocial behaviors moral understanding or social selectivity emerge Contributors will individually address unique research questions across a spectrum of topics For example how prosocial behaviors are influenced by

underlying mechanisms such as moral emotions e.g. guilt and sympathy will be explored as will how children's expectations may shape their behaviors and how they come to care about others. Questions surrounding different contexts will also be investigated. For example, how does empathy influence prosociality? Do children treat partners differently depending on their past behaviors, wealth, or other characteristics? Does whether there is a cost associated with behaving prosocially influence decision making? By incorporating the work of numerous researchers in the field of prosocial development, who contribute comprehensive reviews of past research, unique theoretical perspectives, and empirical approaches, the proposed research topic endeavors to provide new insights into a breadth of prosocial behaviors. In sum, the proposed research topic will contribute to our understanding of prosocial development in the early years by highlighting the relevant factors and contexts under which prosocial behavior emerges.

**A Companion to Anthropological Genetics** Dennis H. O'Rourke, 2019-03-19. Explore the latest research in anthropological genetics and understand the genome's role in cultural and social development. *A Companion to Anthropological Genetics* illustrates the role of genetic analysis in advancing the modern study of human origins, populations, evolution, and diversity. Broad in scope, this essential reference work establishes and explores the relationship between genetic research and the major questions of anthropological study. Through contributions by leading researchers, this collection explores molecular genetics and evolutionary mechanisms in the context of macro and microevolution, paleontology, phylogeny, diet, and disease, with detailed explanations of quantitative methods including coalescent and approximate Bayesian computation. With an emphasis on contextualizing new and developing genetic research within anthropological frameworks, this text offers critical perspective on the conditions of molecular evolution that accompany cultural and social transformation, while also addressing critical disciplinary questions such as the ethical issues surrounding ancestry testing and community-based genetic research. Acts as an essential reference on the contributions of genetic science to the field of anthropology. Features new work by leading researchers of the field. Explores the evolution of immunity, including the genetics and epigenetics of pathogens, chronic illness, and disease resistance. Provides in-depth examination of mutation and dietary adaptation, including AMY1, lactase persistence, and sensory polymorphisms. Explains essential quantitative and phylogenetic methods for aligning genomic analysis with evolution and migration time scales. Offering thorough coverage on leading questions and developing research. *A Companion to Anthropological Genetics* is a comprehensive resource for students and scholars.

**Evolution of Primate Social Cognition** Laura Desirée Di Paolo, Fabio Di Vincenzo, Francesca De Petrillo, 2018-09-14. This interdisciplinary volume brings together expert researchers coming from primatology, anthropology, ethology, philosophy of cognitive sciences, neurophysiology, mathematics, and psychology to discuss both the foundations of non-human primate and human social cognition, as well as the means that currently exist to study the various facets of social cognition. The first part focuses on

various aspects of social cognition across primates from the relationship between food and social behaviour to the connection with empathy and communication offering a multitude of innovative approaches that range from field studies to philosophy The second part details the various epistemic and methodological means there exist to study social cognition in particular how to ascertain the proximal and ultimate mechanisms of social cognition through experimental modelling and field studies In the final part the mechanisms of cultural transmission in primate and human societies are investigated and special attention is given to how the evolution of cognitive capacities underlie primates abilities to use and manufacture tools and how this in turn influences their social ecology A must read for both young scholars as well as established researchers

*Dogs, Past and Present* Ivana Fiore,Francesca Lugli,2023-09-07 This volume gathers contributions from scholars from a variety of disciplines to provide a comprehensive assessment of the importance of dogs through history There is a focus on the necessity of an interdisciplinary perspective to fully understand the fundamental role that dogs have played in our past
