Nye, 2015-01-30 From the Model T to today's lean manufacturing the assembly line as crucial yet controversial agent of social and economic transformation The mechanized assembly line was invented in 1913 and has been in continuous operation ever since It is the most familiar form of mass production Both praised as a boon to workers and condemned for exploiting them it has been

celebrated and satirized We can still picture Chaplin's little tramp trying to keep up with a factory conveyor belt In America's Assembly Line David Nye examines the industrial innovation that made the United States productive and wealthy in the twentieth century The assembly line developed at the Ford Motor Company in 1913 for the mass production of Model Ts first created and then served an expanding mass market It also transformed industrial labor By 1980 Japan had reinvented the assembly line as a system of lean manufacturing American industry reluctantly adopted the new approach Nye describes this evolution and the new global landscape of increasingly automated factories with fewer industrial jobs in America and questionable working conditions in developing countries A century after Ford's pioneering innovation the assembly line continues to evolve toward more sustainable manufacturing

China's Regulatory State Roselyn Hsueh

Romano, 2011-10-15 Today's China is governed by a new economic model that marks a radical break from the Mao and Deng eras it departs fundamentally from both the East Asian developmental state and its own Communist past It has not however adopted a liberal economic model China has retained elements of statist control even though it has liberalized foreign direct investment more than any other developing country in recent years This mode of global economic integration reveals much about China's state capacity and development strategy which is based on retaining government control over critical sectors while meeting commitments made to the World Trade Organization In China's Regulatory State Roselyn Hsueh demonstrates that China only appears to be a more liberal state even as it introduces competition and devolves economic decisionmaking

the state has selectively imposed new regulations at the sectoral level asserting and even tightening control over industry and market development to achieve state goals By investigating in depth how China implemented its economic policies between 1978 and 2010 Hsueh gives the most complete picture yet of China's regulatory state particularly as it has shaped the telecommunications and textiles industries Hsueh contends that a logic of strategic value explains how the state with its different levels of authority and maze of bureaucracies interacts with new economic stakeholders to enhance its control in certain economic sectors while relinquishing control in others Sectoral characteristics determine policy specifics although the organization of institutions and boom bust cycles influence how the state reformulates old rules and creates new ones to maximize benefits and minimize costs after an initial phase of liberalization This pathbreaking analysis of state goals government business relations and methods of governance across industries in China also considers Japan's South Korea's and Taiwan's manifestly different approaches to globalization
