Papéis Avulsos de Zoologia, 2011 **Arctic Ice Shelves and Ice Islands** Luke Copland, Derek Mueller, 2017-05-30 This book provides an overview of the current state of knowledge of Arctic ice shelves ice islands and related features Ice shelves are permanent areas of ice which float on the ocean surface while attached to the coast and typically occur in very cold environments where perennial sea ice builds up to great thickness and or where glaciers flow off the land and are preserved on the ocean surface These landscape features are relatively poorly studied in the Arctic yet they are potentially highly sensitive indicators of climate change because they respond to changes in atmospheric oceanic and glaciological conditions Recent fracturing and breakup events of ice shelves in the Canadian High Arctic have attracted significant scientific and

public attention and produced large ice islands which may pose a risk to Arctic shipping and offshore infrastructure Much has been published about Antarctic ice shelves but to date there has not been a dedicated book about Arctic ice shelves or ice islands This book fills that gap Lemon-Aid Used Cars and Trucks 2011-2012 Phil Edmonston,2011-04-25 A guide to

Tropospheric Investigations Based on Optical Spectroscopy from Mobile Platforms Alexis Merlaud,2013-03-31 This thesis presents the development of four different remote sensing instruments dedicated to atmospheric research and their use in field campaigns between 2008 and 2012 The instruments are based on uv visible spectrometers and installed respectively on a scientific aircraft ultralight aircraft and cars One of the instruments is targeted to operate from an Unmanned Aerial Vehicle UAV The Differential Optical Absorption Spectroscopy DOAS technique is used to quantify the molecular absorption in the spectra of scattered sky light These absorptions are then interpreted by modeling the transfer of radiation in the atmosphere Airborne platforms enable new measurement geometries leading for instance to a high sensitivity in the free troposphere On the other hand a miniaturization effort is required especially for the instruments onboard ultralight aircraft and UAV Reaching the limited size weight and power consumption is possible through the use of compact spectrometers and computers together with custom built electronics circuits and housings A common target of the different experiments is to quantify tropospheric nitrogen dioxide NO₂ Regarding this trace gas the developed instruments provide complementary findings such as the vertical distribution in the pristine Arctic or the levels in the exhaust plumes of large cities like Riyadh Car borne measurements in North West Europe reveal the horizontal gradients of surface NO₂ at various scales The UAV payload is intended to produce high spatial resolution maps of tropospheric NO₂ columns
